

Seventh Annual Production Sale

AT THE RANCH, LULING, TEXAS || DECEMBER 6, 2025 || 1 PM

Welcome

CLYDE AND KAREN SOMMERLATTE, OWNERS

Welcome from the Sommerlatte Family and Staff at 2 Bar C Ranch!

We invite everyone to our 2 Bar C Ranch 7th Annual Production Sale at our Ranch Sale Facility located at 17968 FM 1322, Luling, Texas, 78648, December 6, 2025. If you are unable to attend in person, we hope you will log in online at CCI.Live for the sale at 1:00 p.m. I want to thank all our customers over the past 24 years who have allowed us to build a program that excels in the Angus breed. Also, to all our friends we have made in the Angus business across the country, we thank you for your friendship and patronage!

Cattle will be available for viewing and inspection all day Friday, December 5, and all morning on sale day. Beginning at 6:30 p.m. Friday evening, we have scheduled a wonderful dinner and a special short program. We will be serving lunch starting at 11:30 a.m. on sale day, so bring a big appetite!

Our staff has had a challenging year with the lack of adequate rainfall but, despite that, has done an exceptional job of getting our cattle in pristine condition for the sale. Karen and I want to thank our whole team that has made this sale possible.

We are thankful for the many blessings God has continued to bestow on our family over the years. We are also immensely proud of the team at Hometown Meat Market, which continues to be a reliable resource for our processing customers, retail, and online meat business. Their efforts, along with great community support, allowed Hometown Meat Market to be named Break Out Business of the Year 2025 by the Luling Area Chamber of Commerce and voted Best Meat Market in Caldwell County. 2 Bar C Cattle Company has completed the certification process with Certified Angus Beef® and now offers a Certified Angus Beef® Brand Ranch to Table™ labeled line of beef from our terminal calf line, which includes our Angus commercial cattle and most calves purchased through our ranch buy back program.

We added additional seedstock donors from across the country to enhance our cattle operation. Our genetic lines continue to build and strengthen with each breeding season. This provides us with the means to achieve our goal of offering a line of seedstock to help both registered breeders and commercial producers the ability to achieve significant enhancements for their herds by selecting sires with specific trait strengths tailored to create greater value in their respective operations.

With expansion in pen space in our GrowSafe partnership with Hereford Feed Yard and the Sanchez family (Red Doc Farms) from New Mexico, we now have additional space to collect data on heifers and terminal calves. Because of this expansion, we have the opportunity to open up additional pen space for other producers interested in collecting data on their herds.

The data we collect allows us to validate and supplement our Angus EPD data with **individual performance and feed efficiency information** on our bulls and heifers. Data on feed efficiency is the one thing that will drive profitability in the future for all of us in the cattle business. This program will allow our customers to have the maximum data possible on each animal which will result in the ability to make a better selection of performance traits that will put more dollars in their pockets.

We're excited to announce that after years of collecting data on feed performance, we can now measure water intake which will complete the most accurate measurement for both dry matter and water intake. This is a complete game changer for our customers and will be influential in future buying evaluations and decisions on animals. This entire process has allowed us to partner with Red Doc Farms, Breedr and Green Steak to allow our customers to certify their calves with Green Steak for (Real Progeny Data) RPD™. We provide the **E Index** which is the expected dollar amount difference per head for conversion for their progeny versus average cattle through the feedyard and a **G Index** that is an expected difference per head for Grid premiums for an animal's progeny versus average cattle through a packing plant validated by individual real data.

A BIG THANK YOU to Parker Friedrich and Matt White for all their help in the selection of leading genetic donors that we have been able to acquire over the past years. Your guidance is appreciated forever. And finally, I want to thank Radale Tiner our Regional Manager with the American Angus Association for his guidance, support, and friendship.

2 Bar C Ranch is committed to improving the quality and performance of the Angus breed!

Sincerely,

Clyde Sommerlatte

Jason & Kimberley Booth, Clyde, Karen, Maja & Christopher Sommerlatte

Clyde and Karen Sommerlatte

The Sommerlatte Family

DECEMBER 6, 2025, LULING, TEXAS

*Cattle Producers, are you looking
for a reliable place to process?*
Look to Hometown Meat Market for
your Custom Processing needs!

Hometown Meat Market USDA Processing Facility

We Offer:

Custom Fabrication
Standardized Cut Sheets to Maximize Yield
Covered Pens & Rubber Flooring
Animal Tracking from harvest to pick-up
Vacuum Packaging & Boxing of Final Product
Private Labeling for Farm to Table Producers

Voted Best Meat Market in Caldwell County 2025

Producers' Discount

New Customer Discount: New processing customers receive ½ off the Harvest Fee the first time you process with us.

Offers valid thru December 31, 2025.

Referral Discount: Existing processing customers receive ½ off the Harvest Fee when you refer a new processing customer who processes with us.

FRIDAY EVENING

FOR DINNER AND GUEST SPEAKERS

Mark Nelson & Ian Wheal

Growing up on a diversified livestock and row crop farm and a focused interest in the beef cattle led Mark to the University of Nebraska where he earned BS degrees in Animal Science and Agricultural Education. An eighteen-year career with Cargill included front line management in many departments in the packing plant, buying cattle, and managing their Angus America program. Seven years in the Meyer Natural Foods procurement department developing audit programs and new brands, four years with Growsafe in Program Development and North American sales, and seven more years as an independent consultant including breed association, seedstock breeders, sales management, auditing, and branded beef clients have led Mark to his current role in supply chain management for Sustainable Beef.

This diverse career path, with roles from seedstock to retail, has led to a unique and thorough perspective on sustainability and led to the concept behind Greensteak. Greensteak was founded on the concept of utilizing real phenotypic data, collected in a commercial setting and applying this appropriately to more predictable results from the genetics measured. The Greensteak verification provides a path to transmit value to ranchers, feedyards and the entire supply chain up to the consumer. This common-sense approach is to provide a selection measure to ranchers and feedyards, anchored heavily in sire progeny data collected on the ranch and in the feedyard.

Mark Nelson

Ian Wheal

Ian Wheal is the CEO and Founder of Breedr. Breedr is focused on building rancher lead supply chains that are based on genomic, data and carcass feedback to rapidly optimise quality and consistency. For the past 20 years, Ian has worked in agriculture, technology, data, and business development, with a particular focus on supply chains and technology. Ian was raised on a cattle and sheep farm in Australia, where he received a BEng and BSc in Computer Science, followed by an MBA from London Business School.

GREENSTEAK RPD™ VERIFICATION

Buying bulls you can count on to truly deliver real value to your operation seems to get even harder as we get more information. The Greensteak verification on many bulls in this sale catalog can change this and is not just another data point to sort through.

Greensteak provides a simple status on the bulls that have been proven to deliver efficiency of gain which will **make you money**. Bulls with Greensteak status have earned that status measured on GrowSafe, based upon a combination of datasets from:

- That bull's own actual performance
- Paternal siblings' performance in a commercial setting
- Being sired by a bull which met high selection standards

To deliver this status and value to you, 2 Bar C Ranch has been investing in the top efficiency Angus genetics in the breed, then relentlessly been sifting through and proving them in commercial herds and feedyards to offer you bulls with RPD™s, real progeny data. Now 2 Bar C has joined with an elite group of seedstock breeders who also measure and select their genetics for feed efficiency in real commercial ranch settings in multiple breed contemporary groups.

The concept is simple, Greensteak verifies genetics that are used in commercial ranch settings by following up and collecting data in the feedyard and the packing plant. Greensteak is recognized as a third-party sustainable verification for Sustainable Beef and as a credible tool for a growing number of buyers who recognize the relevance of RPD™s to help them find feeder cattle that convert. Cowherd and Carcass data is also being collected and as more data is compiled, Greensteak Verification will

also include these traits.

The Greensteak verification provides a path to transmit value to ranchers, feedyards and the entire supply chain up to the consumer. This common-sense approach provides an often-missing RPD™ selection measure to ranchers and feedyards, anchored heavily in sire progeny data collected on the ranch and in the feedyard.

Starting with progeny from bulls offered in this sale, you can contact Greensteak to begin to enroll their progeny. Greensteak will provide you with documentation to help you market:

- At your preferred sale barn or video auction.
- To existing buyers in a developing feedyard network who may buy outright or partner with you on retained ownership.

So, look for bulls which have been proven to have Feed Conversion merit and will provide you with more pounds on less feed. As you build a herd bull battery of Greensteak Verified bulls, you can enroll your calf crop through Greensteak and utilize a verification certificate to assure your calf buyers of the real-world proof that your calves will add value to their ownership of your calves!

For more information contact Clyde or Ben!

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

PERCENTILE RANKINGS for the EPDs and \$Value Indexes are listed to allow you to see how the cattle in the sale offering stack up to other animals in the breed.

GROWTH

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for post-weaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Yearling Height EPD (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Dolcility (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Teat Size EPD (Teat), expressed in units of teat size score, with a higher EPD indicating a sire will produce daughters with smaller teat size compared to that of other sires' daughters.

Udder Suspension EPD (UDDR), expressed in units of udder suspension score, with a higher EPD indicating a sire will produce daughters with tighter udder suspension compared to that of other sires' daughters.

Functional Longevity EPD (FL), expressed in number of calves, is a predictor of the number of calves a sire's daughters are predicted to produce by 6 years of age compared to that of other sires' daughters. A higher EPD is the more favorable direction indicating more calves produced on average.

Mature Weight EPD (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height EPD (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

Cow Energy Value (\$EN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

CARCASS

The genetic evaluation produces a single set of EPDs for carcass weight, marbling score, Ribeye area and fat thickness. The units of measure are in carcass trait format and analyzed on an age-constant basis.

Carcass Weight EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value indexes, are multi-trait selection indexes to assist beef producers by adding simplicity to genetic selection decisions. \$Values are reported in dollars per head, where a higher value is more favorable. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

Weaned Calf Value (\$W), an index value expressed in dollars per head, is the expected average difference in future progeny performance for pre-weaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

Feedlot Value (\$F), an index value expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning merit compared to progeny of other sires.

Grid Value (\$G), an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

Beef Value (\$B), an index value expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning and carcass value compared to progeny of other sires.

Combined Value (\$C), expressed in dollars per head, is an index which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid. EPDs directly influencing a combined index are: CED, CEM, WW, YW, Milk, HP, DOC, MW, Angle, Claw, DMI, Marb, CW, RE and Fat.

MEASUREMENTS

Adj. Yrlg. Hip Ht.: Each animal's hip height measured in inches and adjusted to one year of age.

Adj. Yrlg. Scrotal Circumference: The bull's scrotal circumference measured in centimeters adjusted to one year of age.

Adj. %IMF: The percent intramuscular fat (marbling) adjusted to 365 days of age. Heritability for marbling is in the moderate range.

%IMF Ratio: The percent above or below average (100 = average) a bull or female is for its marbling scan within its contemporary group.

Adj. Yrlg. Ribeye Area: Each animal's ribeye area measured in square inches and adjusted to one year of age.

REA Ratio: The percent above or below average (100 = average) a bull or female is for its adjusted ribeye area.

Adj. Rib Fat: This is the off-test backfat measured in inches adjusted to 365 days of age.

Rib Fat Ratio: The percent above or below average (100 = average) a bull or female is for its backfat scan within its contemporary group.

Adj. Rump Fat: This is the off-test rump fat measured in inches adjusted to 365 days of age.

Rump Fat Ratio: The percent above or below average (100 = average) a bull or female is for its rump fat scan within its contemporary group.

WEIGHTS

BW (Birth Weight): The actual weight in pounds at birth.

BWR (Birth Weight Ratio): The percent above or below average (100 = average) a bull or female is for its actual birth weight.

Adj. WW (Adj. Weaning Weight): The weight in pounds at weaning adjusted to 205 days of age.

WWR (Weaning Weight Ratio): The percent above or below average (100 = average) a bull or female is for its adjusted weaning weight.

Adj. YW (Adj. Yearling Weight): The weight in pounds adjusted to 365 days of age.

YWR (Yearling Weight Ratio): The percent above or below average (100 = average) a bull or female is for its adjusted yearling weight.

DAM'S PRODUCTION RECORD

Act.BW (Actual Birth Weight): The number of calves each dam has had and the average actual birth weight of those calves. Example: 3-81 means the dam has had 3 calves with an average actual birth weight of 81 pounds.

BWR (Birth Weight Ratio): The number of calves a dam has had and their average birth weight ratio. Example: 2-98 means the dam has had 2 calves with an average BWR of 98.

WWR (Weaning Weight Ratio): The number of calves a dam has had and their average weaning weight ratio. Example: 2-102 means the dam has had 2 calves with an average WWR of 102.

YWR (Yearling Weight Ratio): The number of calves a dam has had and their average yearling weight ratio. Example: 2-103 means the dam has had 2 calves with an average YWR of 103.

DAM'S ULTRASOUND PRODUCTION RECORD

%IMF: The number of calves that each dam has had, and the average %IMF ratio on those calves. Example: 11-112 means that the dam of this animal has had 11 progeny ultrasounded for IMF with an average ratio of 112.

REA: The number of calves that each dam has had, and the average ribeye area ratio on those calves. Example: 11-112 means that the dam of this animal has had 11 progeny ultrasounded for REA with an average ratio of 112.

Fat: The number of calves that each dam has had, and the average rib fat ratio on those calves. Example: 11-112 means that the dam of this animal has had 11 progeny ultrasounded for rib fat with an average ratio of 112. A ratio above 100 would mean that this animal has above average rib fat (more fat) and a ratio of less than 100 means that the animal has less rib fat (less fat) within the animal's contemporary group.

RU Fat: The number of calves that each dam has had, and the average rump fat ratio on those calves. Example: 11-112 means that the dam of this animal has had 11 progeny ultrasounded for rump fat with an average ratio of 112. A ratio above 100 would mean that this animal has above average rump fat (more fat) and a ratio of less than 100 means that the animal has less rump fat (less fat) within the animal's contemporary group.

CAB TARGETING THE BRAND

The CAB® icon will appear on the pedigree of those animals that meet the criteria for targeting the Certified Angus Beef® brand.

We Know Agriculture.

When it comes to agriculture, experience matters. Our lenders understand your business because they live it — right here in your community. At Frontier Bank, we're proud to serve the ranchers, farmers, and ag producers who keep Texas running strong. From equipment loans to operating lines of credit, we're here to help you grow your operation and your legacy.

Powering the Future of Beef

Enhancing Herd Value for Seedstock and Commercial Cow-Calf Operations

Breedr is an innovative platform to empower cattlemen with real-time insights for informed decisions, ultimately boosting production and profitability. Through working with the Greensteak program, Breedr enables tracking and verification of Real Progeny Data™ (RPDs), building cattle efficiency and value throughout the entire beef production chain.

Key Features of Breedr:

- 1. Ranch Management at Your Fingertips:** Easily collect phenotype data and prepare for genomic analysis with a “ranch in your pocket” solution.
- 2. Data-Driven Decision Making:** Unlike traditional EPDs, Breedr provides actionable insights based on actual performance data. This includes:
 - Optimizing sire selection.
 - Refining herds and culling less productive dams.
 - Verifying progeny performance.
- 3. Strategic Marketing Programs:** Breedr strengthens your position in the beef supply chain through data-backed, sustainable marketing programs, including retained ownership, partial ownership, and buyback options.

As a founding member and partner, Breedr enables Greensteak program participants to **enhance animal value** and **seamlessly integrate with retail supply chains**.

Why Participate in the Greensteak Program?

Rigorous Bull Evaluation

Each bull's worth is proven through comprehensive evaluation, including feed intake systems and datasets that track parentage, sire and progeny efficiency, herd competition, and individual performance.

Comprehensive Progeny Assessment

Progeny are evaluated across commercially-raised contemporary groups, utilizing data from ranches, feedyards, and packing plants to provide thorough efficiency verification.

CONTACT US

To enroll your calves in the Greensteak program, please contact Becca or the Breedr team
Email: SupportUSA@breedr.co | Phone: (737) 412-3131

Marketing your calves with Greensteak

Marketing to your best advantage doesn't have to be challenging. Raising a calf that buyers may pay top dollar for requires a good program. Some ranchers market their own cattle and other ranchers prefer to leave marketing to someone else on their behalf. Either way, Greensteak and your seedstock breeder have you covered.

Greensteak provides your buyers with the reason they need to bid more on your calves. Buyers want feeder cattle that feed and grid better. When you buy Greensteak Verified bulls, we provide you with the verification to show bidders your calves are worth more. Whether you market private treaty, at the sale barn, or on the video, you can use your Greensteak Verification to promote your calves to the highest bidder.

Process:

- Enroll your herd in Greensteak at this bull sale with one of our reps.
- Buy bulls with **E Index (Efficiency)** and **G Index (Grid Value)**.
- When at least half of your bulls' have a Greensteak Value, enroll your next calf crop.
- Enroll your entire calf crop prior to marketing and receive your E and G Index values. Every bull you buy with a Greensteak Index qualifies you for a free enrollment on 15 calves on that bulls' next calf crop.
- Provide your Greensteak Verification wherever you market your calves for discerning feedyards who are looking for feeder cattle that feed more efficiently and earn more grid dollars. Tell us when and where you are marketing your calves and we will notify our participating feedyards.

About Greensteak:

Greensteak works with Seedstock producers who prioritize collecting the data that drives real value. Bulls or their sires are individually tested for feed intake and efficiency to help predict their progeny's feeding performance in the feedyard.

Greensteak Indexes also heavily incorporate RPD's (Real Progeny Data™) and comes from testing genetics in the real world, in a commercial setting. Data is collected from commercial ranches, then the feedyard, and finally through the packing plant. This approach makes the Greensteak Verification more reliable for buyers to predict efficiency in the feedyard and grid values in the packing plant.

E Index	Pounds of Feed	Pounds of Gain
\$62.50	5.0	1.0
\$50.00	5.5	1.0
\$37.50	6.0	1.0
\$25.00	6.5	1.0
\$12.50	7.0	1.0
\$-	7.5	1.0
\$(12.50)	8.0	1.0
\$(50.00)	9.5	1.0

Qualifying sale bulls each have an E Index and G Index listed in this catalog.

E INDEX

The **E INDEX** is an expected dollar amount difference per head for feed conversion for their progeny versus average cattle through a feedyard.

G INDEX

The **G INDEX** is an expected dollar amount difference per head for Grid premiums for their progeny versus average cattle through a packing plant.

Visit with Clyde for more information and to enroll your herd (512) 633-3190

2 BAR C GUARANTEE

2 Bar C guarantees that all breeding cattle are fertile to the best of our knowledge. If a bull is injured or rendered functionally infertile at any time in the 12 months following the purchase date, we will provide a replacement or issue a credit equal to the bull's purchase price less the salvage value.

If a female proves to be a non-breeder at any time in the 12 months following the purchase date, we will offer the buyer the difference between her purchase price and the salvage value as a credit in a future 2 Bar C production or private treaty sale with the exception of heifers used in IVF.

HEALTH AND BREEDING SOUNDNESS EXAMINATION

At birth each calf has blood drawn and sent to the American Angus Association for DNA parentage and any other required testing. Additional blood testing is done within the first year to determine any other situations that would render the animal inferior for breeding purposes. Each animal receives a breeding soundness examination and bulls are fertility tested.

LOYALTY DISCOUNT

2 Bar C gives repeat customers a 5% discount on all purchases made either in a production sale or private treaty sale if you have purchased another animal during the preceding 12 months.

The 5% discount is determined after all other credits have been subtracted from the sale price. If a buyer has not purchased an animal in our prior production sale or private treaty sale during the past 12 months, he or she can become eligible for a repeat-buyer discount by making a purchase.

SEMEN INTEREST

2 Bar C retains 50% semen interest in all bulls. Buyer takes full possession of the animal, but 2 Bar C reserves the right to collect semen. If the semen is marketable, the proceeds will be split 50/50.

BUY BACK PROGRAM

2 Bar C will buy back progeny from our qualifying bulls at up to a \$.10 premium based on qualifications.

For full mortality insurance
to be bound immediately,

please scan the QR code or go to
www.insureyourcattle.com.

Must be done within 24 hours
of sale closing.

If more than 24 hours
after sale closing

please go to
