ONLINE | DECEMBER 19, 2025 | 6 PM (EST)

Welcome

Welcome to our 8th Annual Fall Online Sale December 19, 2025. We are excited to share our genetics with you. Each mating has a future in mind. Phenotype and structure were at the forefront. This offering is small in quantity, yet large in quality.

We lead of the sale with 2 heifers calves out of T276. Boost and Breakaway are a perfect match for this dam that needs no introduction. The lot 2 Craftsman heifer was a tough choice to put in the sale. She has it all. The sire choices on her are endless. The Lot 3 Viscosity sisters out of 2025 are pretty impressive. The Lots 4 and 5 Fault Free heifers will be breeding age by sale time. They both have a front pasture look with a pedigree to back it up. The Ezekial heifers come in as Lots 6 and 7. Lot 6 is a double digit CED, negative BW female with lots of power. Her sister has a balanced set of EPD's with incredible eye appeal.

The Lot 8 Hennessey Pregnancy out of the Beautiful 3259 Donor has a stacked pedigree. This was a match made with careful consideration on the exclusive Hennessey semen. Lot 9 is cutting edge and probably one of the first DE-SU Do Right Pregnancies to hit the Marketplace. The 3077 dam is a sight for sore eyes.

The Embryos out of Grand Slam, Crick, and Mob Boss are destined to be industry leaders. You can't go wrong here. This is a super easy way to catapult any program.

The yearling bulls look great in person and paper. All produced by ET or AI. Their sires are industry leaders. Cigar City retains a 1/3 semen interest.

All the semen packages are rare, unique and hard to get your hands on. Waymaker is the flush brother to the record setting \$520K 44 Farms, Circle F and JB Farms Donor. Getting Hennessey semen is like trying to find a needle in a haystack. Very unique EPD's with super high \$M and + \$EN. This will be the second public offering of Protector. He's a crowd favorite at farm visits. He Froze semen at 13 months of age. His calves just started hitting the ground this week. I'm super impressed with them. He is co owned with Lucky V Cattle. Lastly, the first semen offering of the \$310K valued Cigar Mob Boss. What a unique combination of \$C, \$M, HS, HP, CEM. I knew he was special the day he was born.

Thank you for your interest,

John, Donna and Madison Massaro

A heifer calf pregnancy by the \$110,000 valued Friendship Farms herd sire, De Su Do Right and from a beautifully designed Winchester daughter that is a direct daughter of the legendary \$100,000 valued, deceased FB Genetics and Ozark Mountain donor SEO 764 Karama 0601, who produced the \$120,000 Karama 0601 4416 selected by C5 Angus in the 2024 Source Sessions sale. The early reports on the Crick calves have been outstanding. I would expect that this has untapped, unlimited earning potential. Sells due to calve 2/3/2026 in a reliable recip.

Offering 3 packages of 1 unit each on the \$310,000 Cigar Mob Boss who is a big time performance Grid Maker son that stems from a dam that is the \$25,000 valued Dancing Pedlar Rita 2025. There is genetic potential here folks.

AAA SELECTION TOOLS

Expected Progeny Difference (EPD) is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus.

The percentile ranking is reported alongside the EPD. This shows the ranking for that particular EPD among all non-parent bulls in the American Angus Association database.

GROWTH

Calving Ease Direct (CED) is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

MANAGEMENT EPDS

Docility (Doc), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

Claw Set EPD (Claw), is expressed in units of claw-set score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal claw set. The ideal claw set is toes that are symmetrical, even and appropriately spaced.

Foot Angle EPD (Angle), is expressed in units of foot-angle score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal foot angle. The ideal is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

Pulmonary arterial pressure EPD (PAP), is expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score. PAP score is an indicator of susceptibility to high altitude disease commonly experienced at elevations greater than 5,500 feet. Selection for this trait aims to improve the genetic potential for a sire's progeny to have lower PAP scores thus a lower chance of contracting high altitude disease increasing the environmental adaptability of cattle living in mountain areas.

Hair Shed EPD (HS), is expressed in units of hair shed score, with a lower EPD being more favorable indicating a sire should produce progeny who shed their winter coat earlier in the spring. Selection for this trait should improve the genetic potential for a sire's progeny to shed off earlier increasing the environmental adaptability of cattle living in heat stressed areas and producers grazing endophyte-infected (hot) fescue.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction and the EPD is reported in percentage units.

Maternal Milk EPD (Milk) is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Teat Size EPD (Teat), expressed in units of teat size score, with a higher EPD indicating a sire will produce daughters with smaller teat size compared to that of other sires' daughters.

Udder Suspension EPD (UDDR), expressed in units of udder suspension score, with a higher EPD indicating a sire will produce daughters with tighter udder suspension compared to that of other sires' daughters.

Functional Longevity EPD (FL), expressed in number of calves, is a predictor of the number of calves a sire's daughters are predicted to produce by 6 years of age compared to that of other sires' daughters. A higher EPD is the more favorable direction indicating more calves produced on average.

Cow Energy Value (\$EN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses).

Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

CARCASS

The genetic evaluation produces a single set of EPDs for carcass weight, marbling score, Ribeye area and fat thickness. The units of measure are in carcass trait format and analyzed on an age-constant basis.

Carcass Weight EPD (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value indexes are multi-trait selection indexes to assist beef producers by adding simplicity to genetic selection decisions. \$Values are reported in dollars per head, where a higher value is more favorable. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

Weaned Calf Value (\$W), an index value expressed in dollars per head, is the expected average difference in future progeny performance for pre-weaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

Beef Value (\$B), an index value expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning and carcass value compared to progeny of other sires.

Combined Value (\$C), expressed in dollars per head, is an index which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid. EPDs directly influencing a combined index are: CED, CEM, WW, YW, Milk, HP, DOC, MW, Angle, Claw, DMI, Marb, CW, RE and Fat.

PROFIT STARTS WITH THE RIGHT FOUNDATION

IF YOU'RE TARGETING QUALITY-DRIVEN PREMIUMS, SHE IS HALF THE GENETIC EQUATION.

Targeting the Brand™ identifies registered Angus cattle with the genetic potential to raise calves more likely to meet all 10 *Certified Angus Beef*® brand specifications.

Minimum Genetic Requirements

Marbling EPD (Marb)	+0.65
Grid Value (\$G)	+55.0
