## ILLINOIS PERFORMANCE TESTED BULL SALE

11:00 AM CST • Illinois State Fairgrounds, Artisans Building • Springfield, IL

### IPT BULL SALE MANAGER

Travis Meteer, University of Illinois Beef Extension Specialist  
37737 Perry Fishhook Road, Baylis, IL 62314  
Cell: 217-430-7030 | Email: [wmeteer@gmail.com](mailto:wmeteer@gmail.com)

### AUCTIONEER

Cody Lowderman. . . . . 309-313-2171

### SALE CONSULTANTS

Roger Eakins . . . . . 573-576-2965  
Monte Lowderman . . . . . 309-255-0110  
Ty Murray, AAA . . . . . 515-341-3260

### SALE LOCATION

Illinois State Fairgrounds, Artisans Building  
801 E Sangamon Ave., Springfield, Illinois 62702

### BULL VIEWING

Bulls will be at the sale site after noon on Wednesday, February 18th. The best time to view will be starting at 9am sale day. Consignors will accommodate on-farm viewing prior to the sale if necessary.

### BIDDING

Bidding will be by number. The auctioneer will settle and render final decision on any disputes pertaining to bidding.

### ONLINE BIDDING

Same terms listed above unless outlined by the following:  
Payment is due within 7 days of the sale. Bull transportation is available at buyer's expense.

**Bid online and watch the sale live on CCI.live!**

Call/Text: 405-400-9505 • [schedule@cci.live](mailto:schedule@cci.live)

### ABSENTEE BIDS

If you are unable to attend the sale and would like to place a bid, please contact Travis Meteer. You may also bid online at CCI.live.

### SALE HEADQUARTERS

Ramada North . . . . . 217-523-4000  
3281 Northfield Dr Springfield, IL 62702

### BULL WEIGHING & GRADING

Wednesday, February 18 • 8 a.m. to 12 noon

### PERFORMANCE TESTING PROGRAM AND BULL AGES

All bulls must be performance tested through their respective breed association performance testing program.

(1) Two-year old bulls (born in 2024) must have completed a post weaning record with a minimum of 140 days and must have been 11-14 months of age when weighed off test. The minimum weight per day of age requirements when weighed in Springfield will be at least 2.30 for the Senior Two-Year-Olds. The Fall Senior Two-Year Old bulls minimum weight per day of age will be 2.6 (July-Sept.) and 2.8 (Oct.-Nov.).

(2) Yearling bulls (born from Dec. 1, 2024 through March 31, 2025 must have birth and weaning weights recorded with their association. Minimum weight per day of age requirements when weighed in is 2.9 for Dec 2024 & 3.0 for Jan-Mar 2025.

(3) Genomic-Enhanced EPDs are required on all bulls and these are secured from the Angus, Simmental (SimAngus), and Hereford performance programs.

### BREEDING GUARANTEE

All bulls are guaranteed breeders when given adequate care after purchase (please reference "Bull Management" fact sheet written by Dave Seibert found on the sale website.) A bull is considered a breeder if he settles half of the females he is exposed to during a controlled (60-75 day) breeding season and considering these maximum exposure limits: Senior two-year old, 30 cows; Junior two-year old, 25 cows; and yearling, 15 cows. Yearling bulls should not be used until at least 15 months of age. The breeding guarantee is good through December 1, 2026.

Guarantee is void under the following purchase weight gain/loss situations: Senior two-year-old, weight loss of 15% or more; Junior two-year old, weight loss of 10% or more; and yearling, weight gain of less than 15%.

### REGISTRATION CERTIFICATES

Each bull will be transferred to buyer at seller's expense.

### HEALTH

All bulls have been tested and cleared for Bovine Viral Diarrhea (BVD) Persistently Infected (PI). Also, this year continues the requirement of Johne's Disease Testing. Bulls in the sale will need to do one of the following two items: (1) The dam of the bull consigned must test negative for Johne's disease, OR if the dam is not available, 30 second lactation or later cows must be tested. (2) Originate from a herd that is Level 1 or higher of the Voluntary Johne's Certification Program. Brucellosis testing is not required. Documentation of previous vaccinations will be provided to the new owner.

# Consignors

## EXPECTED PROGENY DIFFERENCE (EPD)

EPDs offer the producer the best predictor of genetic value of a bull. The EPD combines a bull's individual performance with that of his ancestors and related progeny into a single estimate of how a bull's progeny should perform compared to the average of his breed. The accuracy level is dependent upon the amount of performance information available to make the estimate. Research studies have shown an EPD to be up to six times more accurate in predicting progeny performance than adjusted weights. EPDs are within breed comparisons; producers should not compare the EPD values across breeds.

### Actual EPD Percentile Rankings for Production Traits

Since 1990, EPD Group Rankings have been provided on all bulls. This concept ranks bulls within a breed for a similar birth year. Since the 2003 IPT Bull Sale the ACTUAL PERCENTILE RANKING from 01 to 99 will be provided on the production traits. The important thing when evaluating EPDs is to emphasize those traits that you would like to improve in your herd. Selecting a bull to be used on first calf heifers will have different EPDs than one to be used as a terminal sire with all offspring going to market. Thus, you must spend as much or more time evaluating your own herd's strong points and deficiencies prior to considering which bulls to purchase. To make sure you understand where a bull falls within the various traits and their "Percentile Ranking" the following table is provided:

#### EPD Percentile Ranking:

Numerical Percentile Ranking	Birth Weight	Growth (Weaning and Yearling)	Maternal Milk	Marbling and Ribeye
0-30	Lightest	High	Most	Most
31-70	Moderate	Moderate	Moderate	Moderate
71-100	Heaviest	Low	Least	Least

## SALE ORDER

The sale order within age division will be determined by a Power Score. The scoring system uses percentile rank for designated economic selection indexes. The score is a rank (ranked #1 is most desirable), LOWER SCORES mean a more genetically desirable bull.

### The Power Score (PS) will use the following equation:

Simmental PS = (% Rank API + % Rank TI)/2

Angus PS = % Rank for \$C

Hereford PS = (% Rank BMI + % Rank CHB)/2

EPD definitions can be found online, [www.ptsale.com](http://www.ptsale.com).

## SALE MANAGEMENT

The Sale Management and personnel of University of Illinois Extension assume no guarantee on any animal or settlement made between buyer and seller of an animal.

### Attending Sale:

All persons who attend the Illinois Performance Tested Bull Sale do so at their own risk and neither the owner, the Sale Management, nor the Illinois Beef Expo assume liability, legal or otherwise for any accidents which may occur.

### Terms and Conditions:

Payment in full is expected immediately following the sale. Terms are cash unless other arrangements are made with the Sale Management (University of Illinois Extension) prior to the sale.

By bidding you agree to all conditions and information provided in the sale catalog, announcements made prior to the sale, and any supplemental sheets.

**FerAppease®**  
MATERNAL BOVINE APPEASING SUBSTANCE

**A trusted ally in  
every challenge**

# **THE FUTURE STARTS NOW**

Stress is an unavoidable factor in cattle production, elevating cortisol and negatively affecting appetite, immunity, and overall performance.

By reducing the physiological impact of stress, FerAppease supports consistent productivity and improved animal outcomes. Key advantages observed in treated cattle include:

Reduces stress in critical moments

Reduces stress-related diseases

Improves animal welfare

Improves reproductive efficiency

Increases meat and milk productivity

Supports adaptation to environmental changes

One gallon treats 400 animals

## EPD DEFINITIONS

Production, Maternal, and Carcass EPDs are listed for all breeds. Indices are breed specific. EPDs printed in the catalog, as of January 19th, should only be compared within breed as they are not representative of an across-breed EPD.

## PRODUCTION EPDS

**CE/CED (Calving Ease Direct):** Predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers, with a higher value indicating greater calving ease.

**BW/Brth (Birth Weight):** Expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**WW (Weaning Weight):** Expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**YW (Yearling Weight):** EPD expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

**SC (Scrotal Circumference):** EPD expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

## MATERNAL EPDS

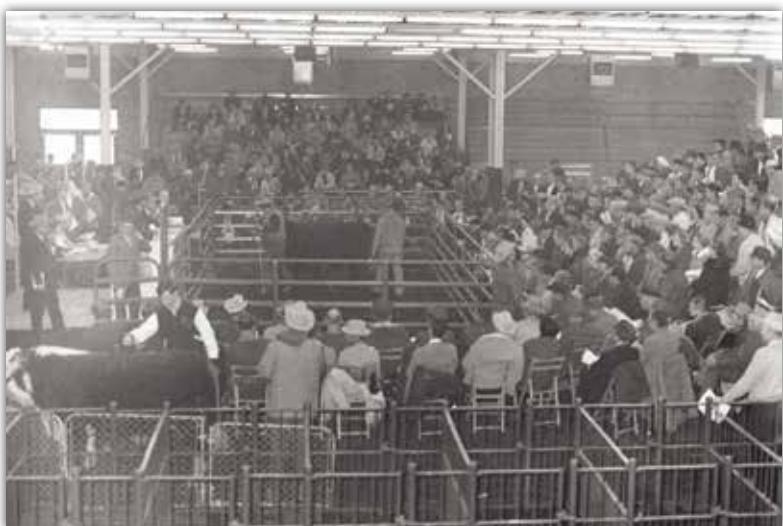

**Calving Ease Maternal (CEM):** is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

**Milk (Maternal Milk):** A predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires.

## CARCASS EPDS

**Marb (Marbling):** Expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

**RE/REA (Ribeye Area):** EPD expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

*The Second IPT Bull Sale • 1969*

## ANGUS INDICES

**\$M (Maternal Weaned Calf Value):** An index, expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation.

**\$B (Beef Value):** A terminal index, expressed in dollars per carcass, to predict profitability differences in progeny due to genetics for postweaning and carcass traits. This terminal index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a carcass grid.

**\$C (Combined Value):** An index, expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid.

## SIMMENTAL INDICES

**API (All Purpose Index):** Dollars per cow exposed under an all-purpose-sire scenario. Evaluates sires for use on the entire cow herd (heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

**TI (Terminal Index):** Dollars per cow exposed under a terminal-sire scenario. Evaluates sires for use on mature cows with all offspring put on feed and sold under grade and yield.

## HEREFORD INDICES

**Black Baldy Maternal Index (BMI\$):** – This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

**Certified Hereford Beef Index (CHB\$):** – a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows where all progeny will be targeted for Certified Hereford Beef after the finishing phase.
