

19th Annual Sale

FOUNDATION ANGUS ALLIANCE

FEBRUARY 21, 2026 | 12:30 | LULING, TX |
THE LULING FOUNDATION FARM

WWW.FOUNDATIONANGUSALLIANCE.COM

Welcome to the 19th Annual Sale

As I write this letter, we are rapidly preparing for an impending ice storm that is predicted to provide a lot of stress for our cow herds, as well as the folks that tend to the livestock. This coming right on the heels of as dry a summer and fall as I may have seen since I've been in the cow business.

What this all brings to mind is the adaptability of our Angus cow herds as well as the people that take care of them. These black cattle are built to weather all storms and believe me, in Central Texas, they have to be prepared for about anything. The bright side of all of this is that the value of good beef cattle is as high today as it has ever been in the history of the cattle business. For the first time in many years, if the pastures are short on grass, it will dollar out to buy feed and hang on to your livestock. This is especially true if the livestock are of high quality.

I read recently that around 80 % of the cattle that go through the feedyards and packers, are of high percentage Angus genetics. That number increases yearly. I have heard leaders of two major packing houses state that they wish that all the cattle they processed were Angus carcasses. High quality, adaptability and predictability are the key components of the Angus breed.

On another note, I would like to recognize the service of my good friend, Mike Kuck. Mike is the Manager of the Luling Foundation and has been our hosting partner for the Foundation Angus Alliance, for nearly 20 years. He has served the Central Texas agricultural community for over 25 years, and in his own special way, has bestowed his wisdom on all that he encounters. With his guidance he has turned an old chunk of coal into a true diamond in the world of Texas Agriculture. Next year, the Luling Foundation will celebrate its 100th Anniversary. I attribute a lot of that to Mike's vision and leadership. I am hopeful that he continues, in his private endeavors, to participate in the Angus breed and the Foundation Angus Alliance.

Sincerely,

Bodey Langford - Langford Cattle Co.
Foundation Angus Alliance Member

SALE LOCATION:

The Foundation Angus Alliance sale will be held at The Luling Foundation, Luling, Texas. The Foundation sale facilities are on the western edge of Luling, just off Hwy. 90, on Mulberry Ave.

DELIVERY:

Free delivery to central delivery points for purebred lots within 250 miles of Luling.

In the event your purchases do not qualify for free delivery, truckers will be available to transport cattle at buyer's expense, and all arrangements will be between buyer and trucker.

AREA HOTELS:

Best Western Plus Longhorn Inn - Luling, TX (830) 875-5442

(Approx. 4.5 miles from sale)

LaQuinta Inn & Suites - Luling, TX (830) 351-5320

(Approx. 4.5 miles from sale)

Zedler Guest House - Luling, TX (830) 875-5515

(Approx. 0.5 miles from sale)

Lockhart Best Western - Lockhart, TX (512) 620-0300

(Approx. 13.5 miles from sale)

Seguin Hampton Inn - (830) 379-4400

Seguin Comfort Inn - (830) 372-3990

I-10 at Hwy. 123 (Approx. 22 miles from sale)

AIR TRANSPORTATION:

Austin Bergstrom International Airport

Austin, Texas

Take 183 South to Luling, TX (Approx. 1 hour)

San Antonio International Airport

San Antonio, TX

Take Interstate 10 East to Luling, TX (Approx. 1 hour)

INSPECTION OF CATTLE:

Cattle will be available for inspection beginning Friday, February 13, at the sale site. All cattle will carry lot tags corresponding to sale lot numbers in sale book.

TERMS AND CONDITIONS:

All cattle are to be settled for on sale day prior to load out. Cattle will sell under the suggested Terms and Conditions of the American Angus Association (http://www.angus.org/Pub/suggested_sale_terms.pdf). Announcements made from the sale block or supplement to the sale book take precedence over what is written in the sale book. The sale day supplement will give updated calving, breeding and pregnancy examination information.

TRUCKING:

Truckers will be available at the sale to transport cattle at buyer's expense. All shipping arrangements will be between buyer and trucker.

LIABILITY:

All persons attending the sale and related functions do so at their own risk, legal or otherwise. The owners, sale management, and hosts assume no liability for loss or damages, however so caused.

CATTLE LOADOUT:

Bulls may be loaded out at the end of the bull sale. Females will need to be loaded out following the conclusion of the sale.

SALE ORDER:

Bulls will sell first, followed by registered females. They will sell in sale book order.

INTERNET BIDDING:

If you are unable to attend the sale, bid online for free at CCI.LIVE. If you plan to bid on CCI.LIVE, register today at www.CCI.LIVE.

Your corner of the world *beats* any corner office.

There's no place more beautiful in the world. Which is why you'd never work in the city, spending years to get an office with a view. You've had this view from day one. It's why we love working with people like you — offering loan and insurance products that help you run a successful ranch. And we think you'd love working with us. Because as a member, you'd share in our success with cooperative returns. How's that for a bonus? **To learn more, visit CapitalFarmCredit.com.**

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an “I”, and may or may not include the animal’s own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

PRODUCTION EPDS

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire’s calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire’s ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire’s ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire’s ability to transmit yearling growth to his progeny compared to that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

MATERNAL EPDS

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire’s daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction and the EPD is reported in percentage units.

Maternal Milk EPD (Milk), is a predictor of a sire’s genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf’s weaning weight attributed to milk and mothering ability.

Teat Size EPD (Teat), expressed in units of teat size score, with a higher EPD indicating a sire will produce daughters with smaller teat size compared to that of other sires’ daughters.

Udder Suspension EPD (UDDR), expressed in units of udder suspension score, with a higher EPD indicating a sire will produce daughters with tighter udder suspension compared to that of other sires’ daughters.

Functional Longevity EPD (FL), expressed in number of calves, is a predictor of the number of calves a sire’s daughters are predicted to produce by 6 years of age compared to that of other sires’ daughters. A higher EPD is the more favorable direction indicating more calves produced on average.

Cow Energy Value (\$EN), expressed in dollar savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

MANAGEMENT EPDS

Docility (Doc), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

Claw Set EPD (Claw), is expressed in units of claw-set score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal claw set. The ideal claw set is toes that are symmetrical, even and appropriately spaced.

Foot Angle EPD (Angle), is expressed in units of foot-angle score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal foot angle. The ideal is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

Pulmonary arterial pressure EPD (PAP), is expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score. PAP score is an indicator of susceptibility to high altitude disease commonly experienced at elevations greater than 5,500 feet. Selection for this trait aims to improve the genetic potential for a sire's progeny to have lower PAP scores thus a lower chance of contracting high altitude disease increasing the environmental adaptability of cattle living in mountain areas.

Hair Shed EPD (HS), is expressed in units of hair shed score, with a lower EPD being more favorable indicating a sire should produce progeny who shed their winter coat earlier in the spring. Selection for this trait should improve the genetic potential for a sire's progeny to shed off earlier increasing the environmental adaptability of cattle living in heat stressed areas and producers grazing endophyte-infected (hot) fescue.

CARCASS EPDS

Carcass Weight EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

Group/progeny (C Grp/ Pg and U Grp/Pg) reflects the number of contemporary groups and the number of carcass and ultrasound progeny included in the analysis.

\$VALUE INDEXES

\$Value indexes, an economic selection index allows multiple change in several different traits at once pertaining to a specific breeding objective. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if the sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), an index, expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

Weaned Calf Value (\$W), an index, expressed in dollars per head, to predict profitability differences in progeny due to genetics from birth to weaning. The underlying objective being producers will retain 20% of the female progeny as replacements and sell the rest of the cull females and their male counterparts as feeder calves. Traits included are as follows (in no particular order): birth weight, weaning weight, milk, and mature cow weight.

Beef Value (\$B), a terminal index, expressed in dollars per carcass, to predict profitability differences in progeny due to genetics for postweaning and carcass traits. This terminal index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a carcass grid. Traits included in the index are as follows: yearling weight, dry-matter intake, marbling, carcass weight, ribeye area and fat.

Combined Value (\$C), an index, expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid. Expected progeny differences (EPDs) directly influencing a combined index: calving ease direct (CED) and maternal (CEM), weaning weight (WW), yearling weight (YW), maternal milk (Milk), heifer pregnancy (HP), docility (DOC), mature cow weight (MW), foot angle (Angle), claw set (Claw), dry matter intake (DMI), marbling (Marb), carcass weight (CW), ribeye area (RE) and fat thickness (Fat).
