• HPCA Proficient is one of the most "complete" sons of Veracious that we have ever offered. Study this bull closely as he offers breed leading percentiles in traits that many breeders are looking for today in Claw, Angle, DMI, TEAT, UDDER, FL, Marb, RE, and \$C. This is an exciting young sire! We are selling 100% possession and retaining 1/3 revenue sharing and semen interest in this bull.

- What a way to start this bull sale than with three flush brothers sired by Veracious and out of one of the top proven females we have ever produced, HPCA Clarity 242. 242 was our high selling female from our Spring 2025 sale to Circle F Farms in Georgia while her progeny continues to excel here at HPCA. A734 is an exciting young bull! We are selling 100% possession and retaining 1/3 revenue sharing and semen interest in this bull.

CUSTOMER APPRECIATION NIGHT

THE PETERSENS is an internationally acclaimed bluegrass band, known for tight harmonies and lots of onstage humor, will help us kick off a fun and casual evening. TripAdvisor ranks The Petersens as the #1 show in Branson.

THE TRAVELING TIN CO. is a 1983 refurbished two-horse trailer all decked out in white paint and warm wood tones. The fully-stocked bar staffed by professionals will join us for the evening and serve your favorite adult beverage!

BRANCATO'S CATERING has been providing high quality catering services for Kansas City and Southwest Missouri since 1969. Come hungry and be prepared to enjoy Prime Rib and tenderloin carved to perfection. Mosey on down the line to the Mashtini Potato Bar and choose a topping or fully load up your choice of spuds!

SUNDAY NIGHT
at the ranch
5:00 - 7:00 PM

• W427 is a paternal brother to the \$250,000 valued owned Grimmus female 3/O Eden 404 and a flush brother to the high selling bull from our 2025 fall sale. This young sire offers a tremendous combination of calving ease, growth, and end product value in a powerful, heavy muscled package. Great young bull here. We are selling 100% possession and retaining 1/3 revenue sharing and semen interest in this bull.

Vision might be one of the most underappreciated sires in the industry today. His progeny are consistent, valuable, and eye-catching. A584 fits that description well. We are selling 100% possession and retaining 1/3 revenue sharing and semen interest in this bull.

H P C A VISION A584 - Sells as Lot 14.

BULL GUARANTEE

- ✓ All bulls are DNA tested.
- ✓ All bulls will be ultrasounded.
- ✓ All bulls are negative for PI-BVD.
- ✓ All bulls are freeze branded.
- ✓ Every bull selling has passed a breeding soundness exam.

We guarantee that all breeding cattle sold by Hinkle's Prime Cut, both bulls and females, are fertile to the best of our knowledge. If a bull is injured at any time in the 12 months following the sale so as to make them functionally infertile, we will provide you with a satisfactory replacement, if available, or issue you a credit equal to the bull's purchase price minus the salvage value received for that bull. If a female is determined to be a non-breeder, then we would ask you to sell her and would offer you the difference of her purchase price minus the salvage value as a credit in any future HPCA sale. This guarantee is in addition to the Sale Terms and Conditions of the American Angus Association which also apply. THIS IS NOT A LIFE INSURANCE POLICY, however. We will not replace a dead animal if it is killed or dies for any reason.

A black Angus bull is the central focus of the lower half of the page. It is standing in a field of dry, yellowish grass. The bull is facing slightly to the right but has its head turned back to look over its shoulder towards the camera. Its coat is a solid, dark black. In the background, a metal fence and a clear blue sky are visible.

our commitment to you

BULL DEVELOPMENT

For the past 10 years, all of our bulls have been developed on-site in open pastures. This approach involves providing water, supplements, and minerals at various locations throughout the fields, encouraging the animals to move and remain active. Over the years, we have experimented with different development methods, but none have matched the effectiveness of our current system.

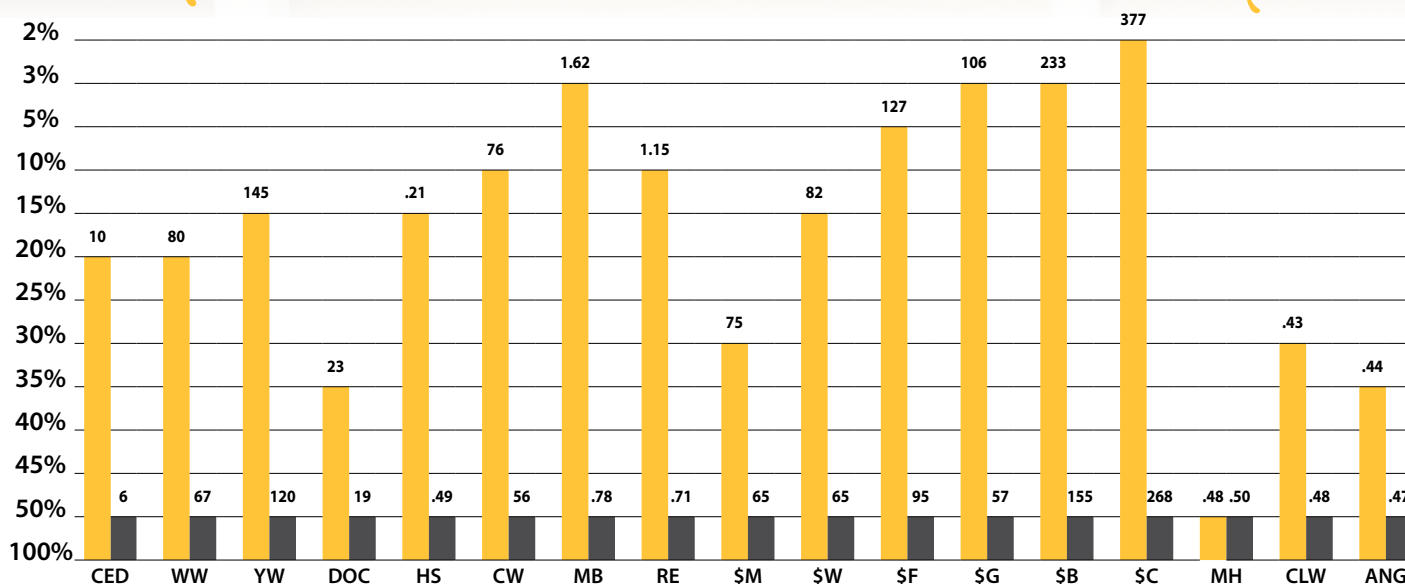

- All bulls are raised and developed here.
- Pasture-based development encourages natural movement.
- Strategic placement of water and nutrition stations promotes exercise.
- We are in these bulls everyday on foot so the bulls are used to people moving through them.

The consistent and overwhelmingly positive feedback from customers highlights the strength of this approach. Based on these results, we have no intention of changing our bull development practices.

— How the bulls stack up

- ✓ We want our customers to know that if they purchase a bull in this sale that it has the genetic potential to move their program forward.
- ✓ Even if you do not retain ownership of your calves you can, and will, see the benefit of HPCA genetics in the females you retain back into your program each year and by stacking the genetics those females will offer, generation after generation, is how you obtain a herd with “Elite” genetic potential.
- ✓ We only want bulls in our HPCA Sales that have the capability of improving the quality of cattle throughout the industry and in the end improving the quality of beef for the end users, the consumer. Our goal is not to sell the most bulls or to be average.

• Another 242 x Veracious son that exhibits the same valuable traits as his older brothers. We are selling 100% possession and retaining 1/3 revenue sharing and semen interest in this bull.

The latest University of Missouri Extension forecasted planning budget shows the average out of pocket cow cost at over \$1,000 per cow for 2024. One of the lowest individual operating costs in that budget is the cost attributed to the bull. Why is something that contributes so much to the “income” side of this planning budget be one of the lowest operating costs?

To me this shows even more reason to purchase the highest quality bulls that an operation can, because if something that is such a low cost to each individual cow, is a critical factor for your income.

WHAT'S A GOOD BULL WORTH IN 2026

Mark Z. Johnson, Oklahoma State University Extension Beef Cattle Breeding Specialist

With the onset of The Cattlemen's Congress currently taking place in Oklahoma City, the spring 2026 bull buying season has officially started. The full schedule of sales during the Cattlemen's Congress can be found at <https://cattlemenscongress.com/sales/>. Bull buying season will continue into the spring months, in Oklahoma and across the nation with progressive seedstock operations offering yearling bulls. Accordingly, it's time to revisit the age old question. What is a Good Bull Worth in 2026?

The Answer

As a student at Oklahoma State University in the mid-1980s, I was taught “A good bull is worth the value of five calves he sires.” It is a good answer and a good rule of thumb to follow, the problem is it doesn't exactly narrow down the range. As always, we need define “a good bull,” check current market reports, answer some questions about how we intend to market future calf crops, and do some “cowboy math” to arrive at a more precise answer.

What is considered a “Good Bull”?

For this discussion, qualifications to meet “Good Bull” status are:

- A bull that sells with a registration paper which includes pedigree information and a complete set of genetic values (including EPDs and Bio-economic indices) to be considered in the selection process.
- A bull that has passed a Breeding Soundness Exam (BSE) and sells with a breeding soundness warranty (terms will vary).
- A bull that will add value to calves sired because he fits your breeding objectives, production system and marketing plans.

When are we marketing our Calves? What is their Value?

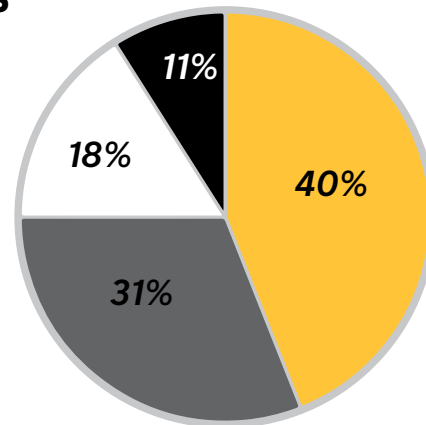

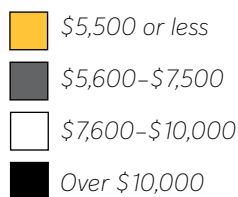

Using the end of year market prices for 2025 from Dr. Derrell Peel's article in the December 29th, 2025 issue of the Cow-Calf Corner newsletter:

500 lb. weaned steer calves were worth about \$4.80/lb. for a value of approximately \$2,400 per head. Therefore, if my future marketing plan is to sell weaned steers, $\$2,400 \times 5 = \$12,000$ is the answer.

There is TRUE VALUE in the spring offering. Every mating, every choice is carefully executed, measured. While the value runs deep, the affordability ranges to meet any budget.

Affordability??? Over 40% of the bulls we sold at public auction over the past five years have sold for \$5,500 or less. With the high quality genetics throughout the offerings, our customers have access to some of the very best genetics in the industry at the most affordable prices you will find!

AVERAGE PURCHASE PRICE OVER THE LAST FIVE YEARS

800 lb. yearling steers were worth about \$3.50/lb. for a value of \$2,800 per head. Therefore, if my future marketing plan is to sell yearling steers, $\$2,800 \times 5 = \$14,000$ is the answer.

1,500 lb. finished beef steers were worth \$2.29/lb. live for a value of \$3,435 each. Therefore, if my future marketing plan is to retain ownership through finishing and sell fed cattle on a live weight basis, $\$3,435 \times 5 = \$17,175$ is the answer.

So, in the current market, a good bull is worth somewhere between \$12,000 – \$17,175 to a commercial cow-calf operation. Where exactly in that range depends on your marketing plan and the market conditions at that time. Not an exact number because there are many variables in play. One key point illustrated here is that the longer you own the offspring before marketing, the greater the value of the bull to your operation. Retained ownership gives you more time and opportunity to capture the value of your investment in genetics. It is noteworthy that we haven't considered the value added to replacement females a bull will sire. Bulls used to sire the next generation of cows have an even greater long-term economic impact on the profit potential of your operation and should be valued accordingly.

I encourage cow-calf operations to consider their breeding goals, production system and marketing plan. Doing so should dictate where to apply selection pressure. Genetic values pay when you purchase bulls capable of improving genetic potential for the specific traits that will translate to added value at your intended marketing endpoint.

“

Don't ever buy a bull **JUST BECAUSE** he sells for \$3,500. Most of the time those bulls are not going to help you or your program.

HOWEVER, you also do not have to spend \$20,000. Buy the best possible bull you can for your spending limit. Do yourself a favor and get a **GOOD ONE!**

”

Calving ease, growth, end product, top 10% angle, and top 1% claw. We are selling 100% possession and retaining 1/3 revenue sharing and semen interest in this bull.

Bulls are Your Genetic Investment

by Erik Andersen, 54 Vet Clinic, Nevada, Mo.

It takes a lot of time to look over bulls in this sale book and walk through the bulls in the pens. After a bull(s) is purchased, not only has a financial investment been made, but also an investment in genetic progress. In order to get the most potential out of your investment, we need to make sure we also invest in the management, feed and care of the bulls. When you purchase these bulls, they still have a significant amount of growth and development ahead. It's like a college football player moving to the NFL—there will be a couple of years of development to handle the full-time position.

The HPCA bulls are developed at home and maintained on a Purina ration with Intake Modifying Technology (IMT) that regulates the bulls' intake to small amounts several times a day. This allows the bulls to grow and express their genetic potential without worrying about founder, liver abscesses or bloat. This also allows the bulls to develop correct skeletal structure, muscle development, foot structure and proper testicular development without getting "fat." A certain amount of fat is needed, since it is the precursor for the steroid hormones. But, too much fat, particularly in the scrotum, falsely elevates the scrotal measurements and increases testicular temperatures, which affects sperm production. Also, if a bull loses too much condition and does not have enough fat for the steroid precursors, he is unable to have good libido.

The bulls at HPCA are managed in larger pastures to encourage exercise, good muscle and structural development, proper foot conformation as well as grazing native fescue. The bulls are evaluated each day. Bulls that display foot or structural problems or docility issues are culled. Rest assured, HPCA has spent time, money and best practice management before an animal earns a position in the sale. It is the Hinkle family's goal, as well as my goal as the farm's veterinarian, to make sure you have the very best bull possible and for him to do the best job for you in your herd. The HPCA goal is to produce bulls that will go out and work, produce a calf that will grow, and either go back into the herd as a replacement or go on to the feed yard, convert, then produce a highly valued end product.

After purchasing the new bulls, it is best to get them into your environment 60-90 days prior to turnout to allow them

to co-mingle with other bulls, establish their social hierarchy and adjust to a new nutritional environment. Don't forget, these young bulls are still growing and depend on you to keep them growing in optimal condition. The bulls will require 2-3% of body weight in dry matter to target a 2 lbs. of gain per day. The single most important thing to remember with young bulls is to target a body condition score of 6. We want a well-conditioned 6, not a "fat" 6 that will melt! During breeding season, a young bull may lose 1-2 body condition scores. An animal of body condition 4 will have the last 3-5 ribs showing. Body condition 5 will have the last 1-2 ribs visible. A body condition score of 6 will have no ribs visible but should still have the outline of the hip and pin bones visible. The hip and pin bones will be slightly visible with a body condition score of 7. We want to stay away from too much condition. The bulls should have plenty of area to get exercise and maintain their mobility. The goal is to keep these bulls as athletes if we expect them to work. There is a big difference between a 6-foot, 250 lb. linebacker and a 6-foot, 250 lb. "arm chair" quarterback! They may look the same on paper, but being in proper condition for the job, they will have vastly different outcomes.

At turnout, young bulls should be put out with other bulls of similar age and size, in multi-sire pastures to decrease the chance for injury.

The ratio of bull to females is typically the age in months of the bull equals the number of females he should be able to service. For example, a 15-month-old bull should be able to service 15 females, up to three years of age. We all know there are bulls that certainly have more libido than others and can breed more. The flip side is there may be some with lower libido and unable to service as many. A Bull Semen Evaluation (BSE) looks at the bull's physical condition and semen characteristics. To date, there is no test for libido. Careful attention should be paid to watching bulls service females correctly. Settling them is very important, particularly with new or young bulls. A young bull should be out no longer than 60 days at a time or switched out during the breeding season to keep them in optimal condition. If a young bull begins to lose body condition and gets below a body condition score of 5, it is advised to pull him. Keep in mind, bulls are an investment. The longer they stay

around, the better the investment. We want to make sure we take care of them, allow them to grow to their potential, and have a long, productive breeding life.

Allowing a bull to lose body condition not only affects how many cows a bull can service, it also lowers hormonal and testicular function. When feeding a young bull back to proper body condition, we want to make sure we don't "pour the feed to them." This makes a bad situation worse. Too much feed affects hoof wall growth, potential for liver and foot abscesses, founder and decreased testicular function. When feeding a bull back to condition, make sure to do it gradually at 2-2.5 pounds of gain per day or risk causing the problems listed above.

Remember that each operation is different as to age of bulls, bull to cow ratio, drought, extreme cold, available or condition of forages and supply, condition of bulls and cows, water quality, bull libido, injuries or lameness, size of breeding pastures, whether the bull keeps the cows grouped up and the number of bulls in the breeding pasture. Our investment in breeding stock is similar to investing in the stock market or sending a group of calves to the feedlot. We wouldn't think of throwing money in the stock market or sending calves to the feedlot without doing some homework, then monitoring our investment, or calves, during that time. It should be no different with our investment in bulls. We can't just "kick them out" and forget about them. We need to make sure the young bulls are doing what we hired them to do!

Each bull in this sale has had a BSE done within 30 days of the sale. The semen that is examined was actually produced 30-45 days prior to ejaculation. A BSE is not a lifetime guarantee of breeding soundness. If a bull will not be turned out for several months or has been sick or injured, it is advised to test him again. It is also advised to conduct a BSE prior to each breeding season.

A couple of other issues to consider. During extreme cold weather, make sure that bulls have adequate cover and protection to prevent frostbite to the scrotum. Don't forget the mineral program for bulls. Just like cows, the bulls need mineral for proper development. Check with your veterinarian about vaccination and deworming schedules most applicable in your area. Our animals depend on us to take care of them.

• A246 is now nearly 10 years of age, and she continues to defy the odds in today's Angus world that she can produce cattle with projections that still put her progeny in the top 5-10% of the breed. With her our customers also have the opportunity to own cattle out of a proven, reliable, and still athletic female that is as solid a female one will ever find. We are selling 100% possession and retaining 1/3 revenue sharing and semen interest in this bull.

• A694 is a flush brother to the first 3 bulls in this sale, and he exhibits the ability to be as good as they are. This bull reads extremely well. We are selling 100% possession and retaining 1/3 revenue sharing and semen interest in this bull.

Thank You

Hinkle's Prime Cut Angus is a family owned and operated beef operation. We are extremely grateful for every customer, regardless of size. It is important that we understand the needs of our customers. Our goal throughout the year is to make as many farm and ranch visits as possible to understand your operation.

If we haven't visited your operation, WE WILL.

If you need us, call us - ANYTIME.

• That reason is that they are consistently high-quality animals one after another. Our customers deserve this offering. We are selling 100% possession and retaining 1/3 revenue sharing and semen interest in this bull.

BULL SELECTION.

We are frequently asked “why aren’t you using this bull or that bull?” Since day one, the HPCA breeding philosophy has been to use high accuracy, progeny proven sires for the traits of economic importance. Today, high accuracy is supported by genomic data in addition to each animal’s own phenotypic information and ultrasound. Young sires are used today more than ever, and none of those young sires have yet to have progeny that have been through the pasture, feed yard, or on the rail. So, we have found it important to research the dams of these young sires and her progeny “proof.” When looking at young sires, we feel it is important to use all the information we can use to help make our decisions. There are many high-selling bulls that make the news throughout the year. And yes, we have sampled a few of those through the years; unfortunately, most of the progeny from those bulls seldom made it to our sale ring. If we make a poor breeding decision, there is a direct economic impact to HPCA, not to mention the time invested to recognize our mistake. A few of the reasons include poor phenotype, disposition, feet, performance, and end product potential indicated by their individual data and ultrasound. Why this happens is what is represented on a performance pedigree was never proven through generations of progeny and/or the female behind them.

We constantly remind our customers, both seedstock and commercial, that we are ultimately in the food business. We are committed to producing cattle with predictable genetic ability to be vigorous calves with explosive growth, have tremendous end product merit with moderate mature size that continue to have value throughout the supply chain and at the same time, we feel that we are producing some of the finest females in the industry. Some breeders say you cannot produce both, but I believe we can, and are.

We take our responsibility seriously. Our ability to identify young sires is greater than ever before. If our customers are not successful, HPCA will not be successful. While presenting a sale offering of cattle with progeny proven sires, and dams, may not be “sexy,” we are confident we are embracing a discipline that results in cattle you can trust.

Cattle are our business.
YOU are our business.

But **FAMILY** is
everything.

• If you just add \$250 value per calf, per year, the math is simple on why to give a little more for a better bull. We are selling 100% possession and retaining 1/3 revenue sharing and semen interest in this bull.

QUALITY MATTERS

Even in today's markets the demand for value-added cattle with predictable performance has never been higher. There is no better time in history to make the investment in high quality genetics!!

With USDA Prime carcass tonnage (including CAB® Prime) record-large again in 2025 we revisit price spreads up and down the quality grade and branded product offering. Even as Prime carcass supply increased 11% on the year, the annual average Prime premium increased to \$39.04/cwt. above commodity Choice, up \$4.72/cwt. for the year. The record \$56.21/cwt. annual Prime premium, set in 2022, is unlikely to be tested again anytime soon.

BEEF DEMAND DEFIES RECORD PRICES

by Charles Wallace, *Western Livestock Journal* contributing editor

Record-high beef prices are drawing national attention, but according to a new research brief from CoBank's Knowledge Exchange, the real story is not just supply shortages—it's extraordinary consumer demand.

"Twelve months ago, the question was whether beef demand would hold up at higher prices, but today most analysts are fairly certain that beef value risk is to the upside," said Brian Earnest, lead animal protein economist with CoBank.

Beef selection and genetics
The COVID-19 pandemic reshaped consumer spending, pushing households to prioritize luxury goods over luxury services. For many, beef became the standout choice.

"The pandemic led us to a place where 'leveling up' through access to luxury goods is prioritized over luxury services. And beef, specifically high-quality beef, is a luxury good that can be accessed for at-home consumption at a fraction of the cost at fine dining establishments," Earnest noted.

He continued that accessibility has helped U.S. consumers develop a taste for high-end beef. Retail per capita beef consumption is expected to hit 60 pounds this year, with 95% of production grading Choice or higher. For the first time since 1988, production of U.S. Prime beef this spring exceeded the volume of Select, marking a new milestone in beef quality.

CoBank said the change in grading can be attributed to advancements in genetics over the last 30 years.

"The U.S. beef industry is producing a much higher-quality product today than it did 30 years ago," CoBank noted. In the 1980s and 1990s, ranchers identified quality issues in herd genetics and began selectively improving cattle to produce more marbling and better flavor. Programs such as Certified Angus Beef rewarded producers for higher-quality carcasses and raised the overall standard.

Tight supply
CoBank said that even as consumer demand surges, herd rebuilding remains a daunting challenge. After years of drought, forage conditions remain tight. The USDA's mid-year cattle inventory report confirmed U.S. cattle numbers at just 94.2 million head—the lowest mid-year total in 75 years. The beef cow herd and calf crop were also down 1% from 2023.

Ranchers also face steep costs for rebuilding herds. Calf prices hit a record of more than \$400/cwt this summer, making heifer retention more difficult and slowing herd expansion. Adding to the pressure, the discovery of New World screwworm in Mexico constrained imports, which typically provide about 3% of the U.S. supply.

Cow slaughter has also declined sharply—by 12% year over year and 24% below the five-year average—contributing to reduced processing capacity. Saturday kills have been almost non-existent and capacity utilization fell to 77% in late July.

For now, CoBank said that herd liquidation appears to have slowed, but rebuilding has yet to begin. Analysts suggest supplies will remain tight at least through 2026, and likely into 2027.

Revival in demand
On the demand side, beef has enjoyed a revival in public perception. Once criticized for being unhealthy, Earnest noted that beef is now championed by fitness-conscious consumers for its high protein content. The growing popularity of fitness lifestyles and weight management drugs such as GLP-1 medications has only added to demand. Many consumers are deliberately increasing protein intake, placing beef in the spotlight as a nutrient-dense option.

"U.S. consumers can't seem to get enough protein these days, and among animal proteins beef remains king," Earnest said.

Even sharp price increases have not curbed enthusiasm. The Bureau of Labor Statistics reported that while core inflation rose 2.9% year over year in July, All-Fresh retail beef prices jumped 9%, averaging \$8.90/lb. Yet, according to CoBank, "even at those levels, prices have been unable to tame unyielding consumer interest in beef."

Consumers are trading down from ribeye and filet to chuck roast or ground beef, but overall demand continues to climb. As CoBank observed, this has created unusual pressure on ground beef supply, which has in turn boosted reliance on imports for lean trim. U.S. net beef imports topped 2.4 billion lbs. in the 12 months ending in May, with Brazil playing a significant role.

Strong U.S. demand has rippled through global markets.

The Food and Agriculture Organization's bovine meat index hit a record 141.2 in August, up 12.5% from the prior year. U.S. imports surged early in 2025, with the "other nation" tariff-rate quota filled in just 17 days—much of it Brazilian beef. Even after the 26.4% tariff kicked in, Brazilian imports remained competitive. However, a new 50% tariff will test that strength later this year.

The fundamentals of the beef market, including exceptional demand, improved quality and strained supply, have created a rare scenario where record prices have not triggered a drop in consumption, CoBank noted. With U.S. consumers embracing protein-rich diets, global buyers competing for supplies and herd rebuilding years away, beef remains one of the few commodities defying traditional price elasticity.

"Beef appears to be among the few exceptions to the rule of price elasticity," Earnest concluded. "Even at record prices, demand has not softened—it has actually edged upward."

- If your need is an absolutely sleep all night calving ease bull, here he is. With a CED of 20 this guy fills that need! Big time out-cross pedigree with off the chart's predictions. Study this bull very closely. We are selling 100% possession and retaining 1/3 revenue sharing and semen interest in this bull.

“

We may not offer a calf buy-back program, but our bulls are second to none in quality and sell, on average, for less money than many other programs.

WE DO OFFER cattle that are bred to perform in the pasture, feedlot, and the rail. In addition, we also stress sound structure, good udders, and docility.

”

- Big time growth and marbling son of Mahomes. We are selling 100% possession and retaining 1/3 revenue sharing and semen interest in this bull.

ROBUST To quote the folks from Select Sires “HPCA Robust is an exciting addition to our lineup, combining incredible carcass stats with impressive performance. His pedigree reads like who’s who of name brands and includes super cows 6095 and A246. Robust is moderate in stature, a wide-based chunk with plenty of top and hip along with exciting projections for both WW and YW.”

Robust is seeing very heavy use here at HPCA this fall, in both ET and AI, as a number of females in this sale carry his service. He stems from a fantastic Veracious daughter which only adds to his predictability as they are proving to be excellent producers.

• Vision progeny have been in demand for their fine looks and great structure while not sacrificing value. They have proven themselves to be real world cattle that impress and being out of a cow like 979, S585 will be as real-world as they come. We are selling 100% possession and retaining 1/3 revenue sharing and semen interest in this bull.

STOP LEAVING MONEY ON THE TABLE

ANGUSLINK™
VALUE ADDED PROGRAMS

VALIDATE YOUR INVESTMENT

QUANTIFY CALF PERFORMANCE

AMPLIFY MARKETING OPPORTUNITIES

ENSURE YOUR INVESTMENT IN TOP REGISTERED ANGUS GENETICS PAYS OFF ON SALE DAY BY ENROLLING IN ANGUSLINKSM PROGRAMS. THEY'LL HELP YOUR CATTLE STAND OUT TO BUYERS LOOKING FOR CATTLE THAT GROW FAST, GAIN EFFICIENTLY AND HIT GRID PREMIUMS.

- **VALIDATE** your calves are sired by registered Angus bulls with AngusVerifiedSM and reap the rewards of quality Angus genetics.
- **QUANTIFY** your calves' performance potential with the Genetic Merit ScorecardSM and signal to buyers that your cattle will perform in the feedlot and on the rail.
- **AMPLIFY** your selling options with the AngusLinkSM network of buyers and capture maximum value for your top-tier Angus genetics.

I truly believe enrolling your calves in Angus Link will add value. Let me know how I can help.

Kenny Hinkle

FOR MORE INFORMATION, VISIT [ANGUSLINK.COM](https://anguslink.com).

To enroll in AngusVerifiedSM, Genetic Merit ScorecardSM and other USDA Process Verified Programs, **CONTACT IMI GLOBAL AND START GETTING PAID FOR THE VALUE YOU CREATED.**

J614 was in the catalog for last fall's sale and was injured the week leading up to that day. Although it did set him back for a time he is completely healed and sound and ready to go so take advantage of our misfortune and latch onto this good bull. We are selling 100% possession and retaining 1/3 revenue sharing and semen interest in this bull.

Much like the bull before him he was injured at sale time last fall but is 100% healthy now. Physically, size wise, this did set him back significantly compared to the other bulls but it also gave us a chance to collect and sample him on heifers this breeding season as a number of heifers in the sale carry his service. He is the only bull in the breed that offers his level of CED, WW, YW, CW, MARB, RE, \$W, and \$C not to even mention his docility, teat, and udder epds. This bull has the ability to be a tremendous asset to the most progressive program. We are selling 100% possession and retaining 1/3 revenue sharing and semen interest in this bull.

But **FAMILY** is
everything.

YEARLING BULLS

- Selling ½ Interest with the Option to Double. If bid is doubled HPCA will retain 8 transferable embryos over the first year. Rita N305 is without a doubt one of the most valuable Angus females in the breed today as NO other female comes close when you consider only her levels of CED, YW, and \$C alone. Then consider her projections for CW, Marb, RE, Claw, Angle, \$M and then add her impressive phenotype and this is one special and extremely valuable female! Her impressive mother is building to her legendary status with every season here at HPCA as she is destined to be the next great one. I cannot overstate how valuable a female like N305 is. Sells open.

RITA N305

impressive

- This exquisite young female might be the most complete daughter we have ever produced from her sire, HPCA Veracious. Her dam was our high selling female in the 2025 Spring Sale where she sold to Circle F farms in Georgia. A114 is a very special female! Performed 1 IIVF cycle for 8 high-quality embryos. Sells bred 11/5/2025 to the young Select Sires roster member, HPCA Robust.

• If you are looking for Angus females and you do not like S75..... Sells open.

How the females stack up

Everyone can agree, good cows make good bulls. HPCA believes in the power of a cow base and that the foundation of great cattle lies in the cow. But we go one step further to create measured excellence in our cow foundation. Every choice is calculated to maximize each and every cow, her potential and what she will produce. Every decision at HPCA is calculated to generate results that can be measured. And, measured with excellence.

Our foundation donors pictured, as well as some not, have solidified their place in our program for their contributions in producing cattle that have added value to HPCA and our customers' programs alike.

EVERY FEMALE IN THIS SALE RANKS IN THE TOP 10% OF THE BREED OR BETTER FOR \$G, \$B, AND \$C.

• As I have said, we try to make cattle as "complete" as possible, and I think this was a pretty good effort here. Sells open.

“

I read a great quote one day from someone very familiar with the beef business and it was “I’m always skeptical of ‘marketing claims’ of things people say just to get other people to buy their products or like them better. Statements backed by fact? That’s more my style.”

As soon as I read this, I thought that is exactly the way I have felt many times. At HPCA we are going to do everything within our power to help every one of our customers, and WE WILL NEVER TELL YOU SOMETHING that WE ARE NOT CAPABLE OF FOLLOWING THROUGH ON.

”

Thank you
**TO OUR
GREAT
CUSTOMERS**

HPCA WANTS TO WORK WITH YOU AFTER SALE DAY.

- When it’s time to market your steers we can share your information with our buyer contacts – reach out in advance of selling your calves and we will contact buyers on your behalf.
- We connect buyers and sellers for our customers’ replacement females – we have helped customers market or purchase over 1,200 head over the past 18 months.
- We can assist with cattle feeding – many of our customers retain ownership. We can match you with the right people and places in the feeding sector.

- We end this sale with an absolute powerhouse of a female. S402 has been a part of our donor group for over a year now and we are expecting great things from her and her progeny. If you DO NOT like cows that are deep, wide, and powerful then you will not like S402! Has been flushed 4 times for an average of 4 high quality embryos. Sells open and ready to flush or aspirate.

HPCA CUSTOMER SUCCESS

Here are just a few examples of the real success that our customers have seen this past summer.

These were fed and sold in Western Kansas.

Repeat Buyer Policy. Once again, we are offering our “repeat buyer credit policy”. This policy is the same as in previous years. If you purchased an animal in our spring 2025 or fall 2025 sale, you will receive 5% off your purchases in this year’s sale. If you have not made an HPCA purchase in the last 12 months, but make a purchase in this sale, you will become a repeat buyer and receive 5% off of any future purchase you make in our spring 2026 and fall 2026 sale. This 5% discount is determined after all credits have been subtracted from the gross purchase price.

Volume Discount. 5% discount for customers that purchase 6 or more bulls.

Free Delivery. HPCA offers its customers free delivery anywhere in the lower 48 states. HPCA will do everything possible to deliver your cattle to a point that is convenient for both you and the delivery vehicle. With the dramatic increase in delivery costs, there may be instances where we will need to ask the new owners to meet the truck at a central location such as a sale barn or veterinary clinic relatively close to them. We will continue to do everything possible to deliver your purchases directly to you, but just want people to be aware otherwise. If you would like to insure your cattle, you may do so on sale day. Most of the cattle to be delivered from the sale are delivered within 30 days after the sale, and we ask to be prepared for delivery immediately following the sale as we will begin this process the day after the sale.

U-Haul. Any buyer at the sale will have \$100 per lot deducted from the purchase price if they provide transportation for their purchases from Hinkle’s Prime Cut Angus within one week after the sale.

Revenue Sharing and Semen Interest. You will notice we are selling revenue sharing and semen interests on all bulls. This means the bull is totally in your control in how you want to handle him and you get 100% of the salvage value of the bull. Simply, we are reserving the right to a share of semen sales revenue from the bull if, at some time in the future, semen sales become a possibility. If you sell the bull to another breeder, Hinkle’s Prime Cut Angus retains the semen interest.

It is unlikely that large amounts of semen will be sold from many bulls. However, bulls are often “discovered” later in life, after proving themselves in the breeding pasture. It is for this reason we keep a semen interest in all bulls sold in our production sale. Even bulls sold to commercial herds may become popular at a later time, as more carcass data is collected on their calves.

If you purchase a bull that we retain an interest in and you choose to collect semen from that bull as an “insurance policy” for your own use, that semen is 100% yours. Hinkle’s Prime Cut Angus may also wish to collect semen from the bull, either for in-herd use or to build a jointly owned semen bank for sale purposes.

If you are not interested in collecting semen on the bull, HPCA has the right to collect the bull, at their own expense, for their own use. Semen collection will be arranged at the convenience of the owner of the possession interest.

About the Sale

A NOTE FROM KENNY

Welcome to our 24th Annual Spring Production Sale. We are grateful and honored that you have chosen to view our offering and are hopeful of the opportunity to serve you. While there are larger offerings around the country we know you will not find anywhere with better genetics, customer service or commitment to our customers than HPCA. We care about your success!

Our objective has consistently been to breed cattle that excel in economically significant traits essential for our clients' success in the beef industry. These attributes include fertility, calving ease, growth, superior end-product qualities, and females capable of thriving within their environments. We aim to deliver livestock that are docile, sound, functional, and demonstrate efficient feed conversion.

The cattle market is currently experiencing extraordinary demand for premium beef, with record prices present across all segments. The reputation of Certified Angus Beef has driven consumers to seek out superior eating experiences, resulting in increased demand and enhanced premiums for elite Angus genetics. This favorable climate makes investment in our offering particularly advantageous, as high-quality beef continues to set benchmarks within agriculture and provide substantial returns for producers.

Operating as a family business, we remain dedicated to fostering our customers' achievements and satisfaction. Our ongoing collaboration with both beef consumers and clients underscores our commitment to delivering cattle of excellence – on pasture, in feedlots, and throughout processing. Adhering to our core principles, we strive to raise cattle with comprehensive quality and rigorously evaluate every decision to ensure continuous genetic improvement for both our operation and our customers.

It begs to be repeated that HPCA wants to work with you after sale day.

- When it's time to market your steers we can share your information with our buyer contacts – reach out in advance of selling your calves and we will contact buyers on your behalf.
- We connect buyers and sellers for our customers' replacement females – we have helped customers market or purchase several hundred head over the last 12 months.
- We can assist with cattle feeding – many of our customers retain ownership. We can match you with the right people and places in the feeding sector.

Please make plans to join us in Nevada, MO, on March 16th for our spring sale. We hope you can make it to visit with us and enjoy a relaxing evening of food, entertainment, and great conversation on Sunday, March 15th. If we can answer any questions or help in any way, please reach out. YOU make the long days and uncertainty worth it – we appreciate your continued support.

HOW TO GET HERE

Air Transportation:

Nevada Municipal Airport is approximately 100 miles south of Kansas City. Nevada Municipal Airport handles most private or smaller aircraft. Kansas City International serves all major airlines.

Directions:

If traveling from the north: From Nevada, Hinkle's Prime Cut is located 5.3 miles south from intersections of US 54 and Hwy BB, 1/2 mile west, or from the intersections of US 71 and Hwy BB, go west 4 miles and 3.5 north, then 1/2 mile west.

If traveling from the south: Old Hwy 71 is now I-49. If traveling from the south, take I-49 to Exit 91, follow Outer Road to BB west.
