53rd Annual Carolina Angus Futurity

Dear Cattle Producers,

We invite you to join us on 3.20.26 to start the event with the South Carolina Angus Association Annual Meeting at the Clemson Outdoor Lab. Come early and view the cattle at the T. ED Garrison Livestock Arena at Clemson. You will find a solid offering of Angus Genetics from producers in SC, GA and AL. Friday night at the Annual Meeting you can join the SCAA and meet some of the finest producers in the Southeast. It is a good time to meet producers, make new friends, and visit old friends. The cattle market is strong and the demand for Angus Genetics are very high. You will find a great variety of Angus Genetics throughout this offering. So dig deep and find what you are looking for. There will be plenty of Pairs, Bred Heifers, Bred Cows, Open Heifers and an Embryo Package.

As always, if I can help feel free to reach out with any questions or concerns. Also reach out to the consignors, they will be glad to help with any additional info that is needed. We look forward to seeing you in Clemson for a great set of cattle and even better folks.

Thanks,
Zach Moffitt

Noon - 53rd Annual Carolina Futurity Sale

The 53rd Carolina Angus Futurity *Dedicated to* **LEE CLINTON**

Lee Clinton, owner of Clinton Farms in Clover, SC, was raised on a dairy farm in Clover. Clinton Dairy was owned and operated by his father, uncle, and grandfather. After Lee was born, he was never very far behind them in anything farm related. Lee's childhood was spent learning and working on the dairy, where he fell in love with all aspects of farming from working with cows, milking, feeding, breeding, and running equipment and doing field work. He was known for being able to escape the house at a young age when he was trying to follow his father to the milk barn and even jokes that he drove his first tractor when he was two years old. Lee was able to get out of the house, start the tractor, and then drive it into the side of the house. Thankfully, only the house had minor injuries. Lee also spent most of his childhood and teen years showing cows.

After Lee graduated from high school, he attended Erskine College for a while but decided that his place was on the family dairy farm. He worked with his father in the dairy business until 2004 when his father sold out of the dairy business. Lee decided to try running the dairy on his own and did so until 2007. Lee ended up going to work for Clover School District as a Sports Field Manager, but he deeply missed working with cattle. In 2008, Lee's aunt and uncle brought about 10 Angus cows to the farm to put on the pasture, and Lee considered buying some black cows to have back on the farm. He ended up buying four bred Angus cows from Dean, Nancy, and Clinton Crocker, and the herd has continued to grow from there. One of the cows that he bought from the Crockers, CRR Sarita EXD 161, is considered the matriarch of his herd as most of the cattle on the farm go back to her. Lee quickly learned that Angus cattle breed much easier than Holsteins.

The more the herd started to grow, the more Lee wanted to become involved. With help and encouragement from his friend and neighbor, Neil Boyd, Lee learned more about the Angus breed and business. He decided to join the SCAA in 2012 and consigned his first lot in the Futurity in 2015. He steadily became more and more involved in SCAA by first becoming a board member, then Vice President and Sale Chairman, and President.

Lee is also a board member for the York County Cattlemen's Association and a past president of the South Carolina Sports Field Managers Association. He serves as an Alumni Advisor for the Clover FFA chapter and was honored with their Outstanding Service Award in 2025. He offers his time to help FFA members learn about working with cattle and allowed them to show several of his heifers. He was also recently recognized as the South Carolina Farmer and Agribusiness Association Beef Producer of the Year.

Lee is married to Robin, and they live on the farm in Clover with their dog, June. They love having their nieces and nephews come to help on the farm.

• 3-in-1 Alert! A heifer pair that should be bred back by sale day. This Tahoe daughter has "mama cow" written all over her. She comes to town with a really nice daughter by Select Sires Roster member Yon Saluda. K1105 has a progeny record of 2@104 for WW and 2@106 for YW on two heifers that are being retained in the herd. When you study her EPD profile, you can appreciate her high growth, fertility, Teat/Uddr/FL marks, with balanced foot EPDs. She is in the top 25% for \$Maternal and 2% for \$Wean Index. If you like cows that produce, then don't miss out here!

• P972 is sired by Yon Saluda. His calves have been well received by cattle producers near and far. She is a calving ease female with top 25% growth traits, excellent marks for fertility, Teat/Uddr/FL. Top 5% HS; and top 15% for \$M and \$W. Well-rounded female that should mature to be an asset to the herd.

AI to Baldrige Gibson on 12.24.25, confirmed Preg. Due: 10/2

This female has a pedigree full of Mama Cow Makers - Rainfall, Coleman Charlo, Traveler 004, Playbook, and 1682 - you can't go wrong. She is a balanced-trait female with added value for HS, Marb, and RE. She will breed up, have you a calf, and get it to the weaning pen. She has been bred to Baldrige Gibson for a Fall 26 calf that should be a knockout. The Gibson's have been fast growing, thick, and full of muscle.

This October born Baseline son should be easy to find. Deer Valley Baseline is owned by Deer Valley and Elite Cattle Co here in SC. He stands at Select Sires and has been siring stout, high-growth calves that are thick and stylish. This is a very-balanced heifer that should add value for Production, Maternal, and Carcass Value.

221 Cattle

Due 4.2.26 to BA7 Oaks Bold Ruler

• 221 is bringing you a female with an exciting pedigree. A Gettysburg daughter who stems from Objective 1885, the dam of the great Select Sires Standout - GAR Prophet! M101 is a high-growth female with added Fertility, Milk, CW, and RE. She is in the top 5% for \$W, 2% for \$F, 25% or better for \$G, \$B and \$C. The best part is she will calve shortly after sale day to Bold Ruler, who has been producing sale toppers with great phenotype, muscle, power, and presence.

221 Cattle Co

Due 9/21/26 to Byrd Bullseye

• M126 is a balance trait female from the great Lucy Family. Her maternal grandam is the \$37,500 donor who has made an incredible impact in our program. M126 creates advantages for CED, WW, DMI, Milk, Marb, RE, and \$W. She has been AI'd to Byrd Bullseye for a calf that should have increased growth, and carcass values.

Lee Clinton Farms

AI'd to SAV Grand Canyon on 12.24.25

Check out this Step Up daughter! Talk about females who have very few holes, here she is. Study her management traits - top 35% or better for Doc, Claw, Angle, PAP, and HS. If you want to make cattle better, this is a good place to start. She offers plenty of Growth, Milk, and Carcass Value as well. She is in the top 25 for \$C among all non-parent Step Up daughters out of 1,373 total daughters. If you are marketing Females or Bulls, this is a young female that someone needs to take home and watch her make money!

Lawler Farms

AI'd 11.11.25 to BA7 Oaks Bold Ruler

This female combines Raindance and Whitlock for what should turn into a pretty dependable cow. She has a ton of style, bold rib, and plenty of hip. She is due to calve in August to BA7 Oaks Bold Ruler. We love our Bold Ruler daughters and sons. They are thick, heavy-muscled, and powerful Angus Cattle.

Lawler Farm

AI'd 11.11.25 to BA7 Oaks Bold Ruler

This Veracious daughter will add growth and carcass merit with balanced traits throughout her EPD Profile. She is a nice female on the hoof with plenty of muscle and thickness wrapped in a neat package. She is also bred to BA7 Oaks Bold Ruler for a Fall Calf that should have added muscle, thickness, and style.

BSF Frontier Gal 1W1 - Maternal Sister to Lot 32 & High-Selling Bred Heifer in the 2022 Carolina Futurity.

Black Springs Farm

Open

Power Female from a cow family that has worked for BSF! Frontier Gal 9D5 has been a top producer for the Black Spring Program. Her daughter BSF Frontier Gal 1W1 was the high-selling lot in the 2022 Carolina Futurity. Her progeny have a lot of growth, bone, and style, so put her on the short list. She is a balanced-trait female with a production pedigree that adds style for the front pasture.

AMERICAN ANGUS ASSOCIATION SELECTION TOOLS

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. Accuracy will range from 0 to 1 with an accuracy closer to 1.0 indicating higher reliability. Accuracy is impacted by the amount of information that is included in the analysis including individual genotype and performance records as well as number of progeny and ancestral records.

PRODUCTION

Calving Ease Direct (CED), expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for post-weaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Dry Matter Intake (DMI), expressed in pounds per day, is a predictor of difference in transmitting ability for feed intake during the post-weaning phase, compared to that of other sires.

Yearling Height (YH), expressed in inches, is a predictor of a sire's ability to transmit yearling height compared to that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting scrotal size compared to that of other sires.

MANAGEMENT

Claw Set (Claw), expressed in units of claw-set score, a lower EPD is more favorable, indicating a sire will produce progeny with more symmetrical, even and appropriately spaced toes compared to another sire.

Foot Angle (Angle), expressed in units of foot-angle score, a lower EPD is more favorable, indicating a sire will produce progeny with an angle closer to 45 degrees at the pastern and appropriate toe length and heel depth compared to another sire.

Docility (DOC), expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility in a sire's offspring compared to another sire.

Pulmonary Arterial Pressure EPD (PAP), expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score to decrease the risk of progeny contracting high altitude disease most commonly experienced at 5,500 ft or greater in elevation.

Hair Shed EPD (HS), expressed in units of hair shed score, with a lower EPD being more favorable. This indicates a sire should produce progeny who shed their winter coat earlier in the spring and has improved environmental adaptability in heat stressed areas and grazing endophyte-infected (hot) fescue.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), expressed in pounds of calf weaned, is a predictor of a sire's genetic merit for milk and mothering ability in his daughters. In other words, it is the part of the calf's weaning weight attributes to milk and mothering ability.

Mature Weight (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

CARCASS

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

SVALUE INDEXES

SValue Indexes, expressed in dollars per head, are multi-trait selection indexes where a higher value suggests more profit. The SValue is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (SM), expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning by decreasing mature cow size and improving docility, foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (SW), expressed in dollars per head, provides the expected difference in future progeny pre-weaning performance from birth to weaning.

Energy Value (SEN), expressed in dollar savings per cow per year with a larger value being more favorable. It assesses differences in cow energy requirements, due to maternal milk and mature cow size.

Feedlot Value (SF), expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning feedlot merit (growth and feed efficiency) compared to progeny of other sires assuming producers retain ownership of cattle through the feedlot phase and sell on a carcass-weight basis.

Grid Value (SG), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (SB), expressed in dollars per carcass, represents the expected average differences in the progeny post-weaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot and sell on a carcass merit grid.

Combined Value (SC), expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (SM) and Beef Value (SB) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid.
