**SCHEDULE OF EVENTS**

**Friday, March 20, 2026**  
2:00 PM - Cattle on Display

**Saturday, March 21, 2026**  
8:00 AM - Coffee and Donuts  
11:00 AM - Lunch  
12:00 PM - Sale

**SALE LOCATION**  
Cattlemen's Livestock Exchange  
Physical Address: 7750 White Drive, Cord, AR

**HEALTH:**

Complete health papers will be furnished for immediate shipment. All cattle have proper vaccinations. Calves: Age three months and above will have IBR, BVD, BRSV, Pasteurella, 7-way Blackleg and Haemophilus. Cows and Bulls: IBR, BVD, 7-way Blackleg, Haemophilus and Lepto-vibrio. AM, NH and CA tested free or no carrier ancestors.

**VIEWING OF CATTLE:**

Videos of sale cattle can be viewed two weeks before the sale by visiting [www.simsplusllc.com](http://www.simsplusllc.com). Cattle will be available for inspection at the sale site Friday afternoon, March 20, 2026.

**LIABILITY:**

All persons attending this sale do so at their own risk. Sims Plus, LLC, Cattlemen's Livestock Exchange, and the N.E. Arkansas Angus Association act as agents only - agreement is between the buyer and seller.

**ANNOUNCEMENTS:**

All announcements made from the sale box take precedence over sale book information.

**SALE BOOK:**

Please bring this sale book with you on sale day.

**SALE MANAGED BY:**

Mark Sims  
Mark's Cell: (580) 595-0901

Friends and Fellow Cattlemen,

On behalf of the Northeast Arkansas Angus Association (NEAAA), I would like to welcome you to their 36th Annual Spring Sale. In the spring of 1991 this association launched their first Angus sale. In the fall of 1994, they added a second sale, thus this sale marks their 68th sale! The NEAAA is one of the premier regional breed associations in the eastern US and for over 30 years they have been providing cattlemen in the area with an avenue to purchase quality Angus cattle.

As I write this letter, the cattle market continues to be as strong as it has ever been. With the profit margins we've been seeing, it makes sense to invest in quality genetics to move your operation forward. Once again, the group of breeders in this sale have put together an outstanding offering of bulls and females. 93 lots including 56 bulls, 36 females and 1 package of embryos will be ready for your appraisal on March 21, 2026, in Charlotte, Arkansas. It is important to note all the bulls and females have been genomic and parentage tested.

We hope you can join us on the third Saturday in March at Cattlemen's Livestock Exchange in Charlotte, Arkansas. Cattle will be on display Friday afternoon and the sale starts at 12:00 noon on Saturday. Lunch will be provided and served around 11:00 AM. If you are unable to attend, feel free to bid online through [www.CCI.live](http://www.CCI.live). Videos of the sale offering can be viewed by visiting my website at [www.simsplusllc.com](http://www.simsplusllc.com). As always, if I can be of any assistance do not hesitate to call, text, or email me.

Sincerely,

Mark C. Sims

# AAA SELECTION TOOLS

**Expected Progeny Difference (EPD)**, is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

## PRODUCTION EPDS

**Calving Ease Direct (CED)**, is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

**Birth Weight EPD (BW)**, expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**Weaning Weight EPD (WW)**, expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**Yearling Weight EPD (YW)**, expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

**Yearling Height EPD (YH)**, is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to that of other sires.

**Scrotal Circumference EPD (SC)**, expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

## MATERNAL EPDS

**Heifer Pregnancy (HP)**, is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction and the EPD is reported in percentage units.

**Maternal Milk EPD (Milk)**, is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

## MANAGEMENT EPDS

**Dockity (Doc)**, is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable dockity. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

**Claw Set EPD (Claw)**, is expressed in units of claw-set score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal claw set. The ideal claw set is toes that are symmetrical, even and appropriately spaced.

**Foot Angle EPD (Angle)**, is expressed in units of foot-angle score, with a lower EPD being more favorable indicating

a sire will produce progeny with more ideal foot angle. The ideal is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

**Hair Shed EPD (HS)**, is expressed in units of hair shed score, with a lower EPD being more favorable indicating a sire should produce progeny who shed their winter coat earlier in the spring. Selection for this trait should improve the genetic potential for a sire's progeny to shed off earlier increasing the environmental adaptability of cattle living in heat stressed areas and producers grazing endophyte-infected (hot) fescue.

## CARCASS EPDS

**Carcass Weight EPD (CW)**, expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

**Marbling EPD (Marb)**, expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

**Ribeye Area EPD (RE)**, expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

## \$VALUE INDEXES

\$Value indexes, an economic selection index allows multiple change in several different traits at once pertaining to a specific breeding objective. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if the sires were randomly mated to cows and if calves were exposed to the same environment.

**Maternal Weaned Calf Value (\$M)**, an index, expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, dockity, mature cow weight, claw set and foot angle.

**Weaned Calf Value (\$W)**, an index, expressed in dollars per head, to predict profitability differences in progeny due to genetics from birth to weaning. The underlying objective being producers will retain 20% of the female progeny as

replacements and sell the rest of the cull females and their male counterparts as feeder calves. Traits included are as follows (in no particular order): birth weight, weaning weight, milk, and mature cow weight.

**Feedlot Value (\$F)**, an index, expressed in dollars per head, to predict profitability differences in progeny due to genetics for postweaning feedlot merit compared to the progeny of other sires. The underlying objective assumes producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis, but with no consideration of premiums or discounts for quality and yield grade. Traits contributing directly to the index are as follows: yearling weight (gain), carcass weight and dry-matter intake.

**Grid Value (\$G)**, an index, expressed in dollars per carcass, to predict profitability differences in progeny due to genetics for carcass grid merit compared to progeny of other sires. The underlying objective assumes producers will market cattle on an above-industry-average carcass grid. Traits included in the index are as follows (in no particular order): carcass weight, marbling, ribeye area, and fat.

**Beef Value (\$B)**, a terminal index, expressed in dollars per carcass, to predict profitability differences in progeny due to genetics for postweaning and carcass traits. This terminal index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a carcass grid. Traits included in the index are as follows: yearling weight, dry-matter intake, marbling, carcass weight, ribeye area and fat.

**Combined Value (\$C)**, an index, expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid. Expected progeny differences (EPDs) directly influencing a combined index: calving ease direct (CED) and maternal (CEM), weaning weight (WW), yearling weight (YW), maternal milk (Milk), heifer pregnancy (HP), dockity (DOC), mature cow weight (MW), foot angle (Angle), claw set (Claw), dry matter intake (DMI), marbling (Marb), carcass weight (CW), ribeye area (RE) and fat thickness (Fat).

## FASTER PROGRESS, GREATER RETURNS

Targeting the Brand™ identifies registered Angus bulls with the genetic potential to sire calves more likely to meet all 10 Certified Angus Beef® brand specifications.

### Minimum Genetic Requirements

Marbling EPD (Marb) +0.65

Grid Value (\$G) +55.0

- Selling four IVF embryos. Guaranteeing one 90-day pregnancy if transferred by a certified embryologist.

Driving the science of better breeding

There's little room for error in the cattle business. Producers need the most advanced information to make smart selection decisions, and Angus Genetics Inc. (AGI) provides it through genomic-enhanced expected progeny differences (GE-EPDs). EPDs that traditionally contained all pedigree, performance and progeny information now also include results from available genomic, or DNA, tests. Breeders who use genomic technology give buyers access to AGI-generated GE-EPDs that provide:

- Increased predictability and decreased risk for young and unproven animals due to enhanced accuracy of EPDs
- Better characterization of genetics for difficult-to-measure performance traits (such as carcass traits, maternal traits and feed efficiency)
- The ability to make more rapid progress for traits that are important to you, due to:
  - more accurate selection
  - easier identification of genetic outliers
  - the ability to propagate young animals with confidence earlier in their lives

In fact, GE-EPDs on unproven animals have the same amount of accuracy as if they had recorded 8-33 calves, depending on the trait. That's valuable insight, offered regularly through the breed's weekly national cattle evaluation at [www.angus.org](http://www.angus.org).

How do you know if EPDs are genomic-enhanced?

Ask your breeder, refer to the registration paper, or look for the AGI GE-EPD logo, Angus GS™ powered by partner Neogen GeneSeek or the HD50k or i50k by partner Zoetis.
