Dear Friends and Fellow Cattlemen,

It is a pleasure to welcome you to our 19th Annual Southern Synergy Female Sale in Wadley, GA. Thank you for your consideration in choosing our genetics to add to your program. The partnership between Ogeechee Farms and CAM Ranches allows the opportunity for Southern Synergy to offer reliable genetics to you in volume at a much younger age. Our 19th sale is comprised of 152 of the best registered females we have ever offered.

Management has, and will continue to be, a key component of overall beef profitability. Supply and demand economics provide insight as to how we have arrived in our current position as an industry. Randy Blach, CEO CattleFax, recently documented that cow herd expansion is in its infancy and will continue at a much, much slower pace than previously experienced. Why is this? A look at the USDA agricultural statistics will show an aging beef producer, higher interest rates, and rising fixed costs. These are battles we all deal with. However, this is an excellent and historic time to be in the beef business as producers are finally reaping the reward of an outstanding price structure irrespective of your place in the beef supply chain.

Beef demand is at a 40-year high. Innovation will be critical to supply more beef with less cattle. How do we do this? The genetic potential for these cattle to grow is enormous. As an industry, we now have specialized nutrition plans to help cattle reach larger target end-points. In 2024, carcass weights increased by 27 lbs, which is the equivalent of an additional 1M harvested cattle. In 2025, carcass weights were up another 25 lbs, equating to an additional 900K head. 2026 is forecasted to be bigger yet, with a 12-16 lb range in heavier carcass weights. What does this mean for us? As stewards of the land and cattle, we have embraced this "more with less" philosophy. Our cattle reflect an ability to achieve innovation, while not breaking the bank back on the farm. It really is just that simple.

Our main focus has been—AND WILL ALWAYS BE—to produce a product that is in extreme demand, commands the center of the plate, and leaves each and every consumer with a memorable eating experience. America, and the world, wants and demands high quality beef. Genetic acceleration allows us to move a population of cattle forward rapidly and enhance the potential for producers to capture every premium they are capable of. The Southern Synergy goal is to generate cattle that hit profitability targets. We are proud partners with Gardiner Angus Ranch, where all of our bull progeny have been developed and marketed for the past 20+ years. This partnership has allowed us a 35,000 ft view of how our genetics work all across the country, whether in the pasture, the feedyard, or on the rail. We are fortunate, in most years, to live in an area with abundant rainfall and grass. However, we are also tasked with producing cattle that can survive and thrive in the high desert regions of Arizona, the rainy pacific northwest of Washington, the extreme upper midwest of the Dakotas, and everything in between. Our disciplined breeding approach relies on reproductive and structural soundness, calving ease, rapid growth, moderate mature size, and extreme end-product merit. This year's offering reflects intense selection pressure for optimum calving ease and growth, while pushing the limit for highly heritable carcass traits. ***The 152 females average +11 CED, +141 YW, +1.72 marbling, +1.13 REA, +236 \$B, and +374 \$C, while simultaneously keeping mature size in bounds.***

You will notice throughout the sale book several "excerpts" from Smitty Lamb's "Chairman Letter" from his recently fulfilled role as Chairman of the Board for *Certified Angus Beef*® in 2025. What a journey this has been, and the perspective gained has been the ultimate reward. The respect and power of the Certified Angus Beef brand cannot be understated. The connection the brand has fostered between farmers/ranchers and consumers in a way that honors our commitment to the land and cattle is remarkable. This connection is vital for the future and important for all of us to continue to foster.

We will once again offer free delivery of cattle anywhere in the lower 48 states. We look forward to seeing you at the farm near Wadley on April 11, 2026. You are all invited to view cattle on Friday evening (April 10) and enjoy dinner with us. As in previous years, all sale lots will be videoed and broadcast during the sale via CCI.Live for your convenience. We look forward to your appraisal of the cattle. Our mission is simple: produce an impeccable product and offer unparalleled customer service. If you need anything at all please don't hesitate to ask.

Half-Interest Sells!

We are offering half interest in two of the most intriguing heifer calves ever bred in our program. Both are daughters of the \$115,000, Ogeechee FB Grid Maker 17150, owned by Barry Nowatzke, Pollard Farms and Maple Lane Angus. 17150 is only

beginning to write her story and she is currently the #2 cow in the breed for \$C and is the only cow with her combination of CED, Marbling and \$C.

Certainly a highlight of the spring sale season, Ogeechee Home Town K230, is the proven young donor female in the joint embryos programs of Ogeechee and Tall Timber. She is the popular full sister to GAR Home Run and perhaps best known as the dam of Ogeechee IT Stapleton 414. Her first natural calf, 414, sold in last years sale as the \$310,000 sale topper going to Circle F, 44 Farms and JB Farm. K230 currently ranks as the 13th highest dam among all Angus cows for \$C and one of only 5 in the to 20 \$C cows that has progeny scan data. What an exclusive opportunity to own K230 in her entirety. 13 IVF collections to average 4 embryos per collections. 3 conventional flushes to average 3 embryos per flush.

3A: 3 IVF embryos by GAR Wallace

One IVF cycle resulted in 2 transferable embryos. Bred 1/2/2026 to PEAK Draft Pick. Confirmed safe with embryo sexed as a bull.

One of the very best and valuable daughters of PEAK Stapleton in the breed that will make many friends on sale day. Five full brothers averaged \$18,000 in the recent Early Bird sale at GAR. A294 represents that same "kind" that is highly sought-after and will propel a herd forward in multiple ways.

Elite heifer! You can't have too many Stapleton daughters. This one is top 2% for CED, 10% for YW, 2% for \$F and top 1% \$G, \$B and \$C! Serviced 1/27/26 to GAR Grand Slam. PE to GAR Alpha since 2/1/26. Flushed 2 times averaging 3 embryos per flush.

“ I've had the privilege to witness the power of the *Certified Angus Beef*® brand first-hand. The demand for it is strong, the quality keeps getting better, and the respect this brand holds across the beef industry, here at home and around the world is second to none. That's not only a point of pride; it's a responsibility we all share to carry forward. ”

Smitty Lamb, Chairman of the board, Certified Angus Beef

Fireball has proven to be the leader in the clubhouse for generating extremes with regards to carcass weight and marbling, the 2 key components of carcass value. Two IVF collections have averaged 2 transferable embryos. Bred 11/2/2025 to PEAK Stapleton. Confirmed safe with embryo sexed as a heifer.

Recent Prime demand models show 20% and greater year-over-year consumer demand increases for multiple months for the recent two years. Growing Prime supply has been met with growing demand, generally across the last decade. The recent added upswing in the Prime carcass supply suggests that expanded utilization of Prime-specific sales across the entire carcass is warranted. In the past couple of years packers have added a growing list of cuts to their sales sheets specific to their Prime-graded product. This is evident in Certified Angus Beef® brand sales as we have seen the most recent year's sales growth in the CAB® Prime category.

It's imperative to credit beef quality advancement in the consumer behavior discussion. The beef industry is offering consumers the most satisfying eating experience they've ever encountered, as the share of USDA Prime and Certified Angus Beef® brand product continue to swell as a portion of fed cattle production. This leaves little doubt that marbling-rich carcasses are driving beef to outperform other protein sources in the meat case.

— Paul Dykstra, Director, Supply Management & Analysis

“

As carcass quality improves and the average marbling (Marb) expected progeny difference (EPD) for the Angus breed increases, many Angus breeders ask the supply development team at Certified Angus Beef (CAB), “Do we still need to focus on marbling? Data says yes.

The Angus breed has a strong market share, with 72% of fed cattle being Angus-influenced. Still, only four in 10 head that meet the live animal specifications go on to meet all 10 CAB carcass specifications. In 2024, 82% of Angus-influenced cattle didn't have enough marbling.

”

Peak Stapleton progeny are the talk of the town. Serviced 11/29/25 to GAR Logic. Safe. Calf sexed as a bull.

Some Angus breeders or their customers' breeding objectives are higher than CAB acceptance and focus on increasing the number of cattle that grade USDA Prime. In 2025, the industry average Prime acceptance rate was around 11%. If you manage an average commercial cow herd under average management and environmental conditions, then data suggests registered Angus bulls with a +1.10 Marb EPD and +72 \$G have more potential to achieve a 20% Prime acceptance rate.

As you're making mating decisions for your next breeding season or headed to purchase new herd bulls, there's space to put emphasis on marbling without excluding other valuable traits for your operation.

“ This brand [CAB] connects family farmers and ranchers and consumers in a way that honors the work of cattlemen and women while delivering a product people trust and seek out. It connects families around the table, communities through shared meals, and partners across the supply chain who believe in the value of doing things the right way. That connection is vital for our future. ”

Smitty Lamb, Chairman of the board, Certified Angus Beef

Changing A Population Takes Time.

Multi-trait discipline practiced over time, results in changing entire populations of cattle. The practice encourages genetic improvements across all traits of economic importance and avoids single trait selection.

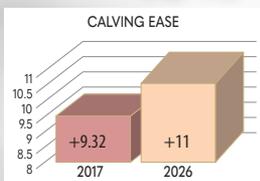

We believe the only way to truly make sustainable, quantifiable progress over time is to measure it! The charts below comparing several, highly heritable multi-trait EPDs and \$Value indexes, documenting the improvements in the Southern Synergy sale offering EPDs, from 2017 to 2026. Changing a population takes time. Trust the process.

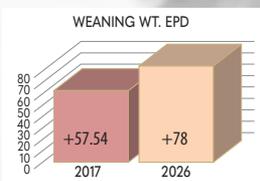

Trust The Process.

Working in Balance

There's value in simultaneously improving carcass and maternal traits in your Angus herd.

By Kara Lee, director of brand management, Certified Angus Beef LLC

When you look at quality grid premiums, Angus cattle continue to defy the fundamentals of supply and demand. As Angus cattle

continue to improve, today there is a higher percentage of high-quality carcasses hanging on the rail, yet producers continue to get paid for it. That's strong demand—and a clear signal back to ranchers.

These gains are driven by consumers who continue to purchase beef for its superior taste and tenderness. As this pull-through demand signal from the consumer has become evident, Angus breeders have met end-users' increased appetite for quality beef. At the same time, Angus cows continue to offer strong maternal traits while raising calves that may later enter the supply chain.

As carcass quality improves and the average marbling (Marb) expected progeny difference (EPD) for the Angus breed increases, many Angus breeders ask the supply development team at Certified Angus Beef (CAB), "Do we still need to focus on marbling?"

Data says yes.

Reasons Angus-Influenced Carcasses Didn't Qualify for Certified Angus Beef in 2024

SPECIFICATION	DEFECT RATE (%)
Marbling (less than 500 points)	82%
HCW (greater than 1,100 lb.)	8.6%
Ribeye Area (outside of 10 to 16 sq. in.)	20.5%
Back Fat (greater than 1 in.)	8.6%

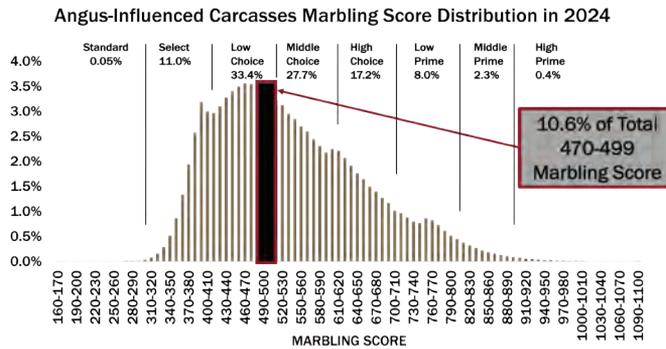

In 2025, the maximum REA was updated to 17 sq. in.

Money on the table

The Angus breed has a strong market share, with 72% of fed cattle being Angus-influenced. Still, only four in 10 head that meet the live animal specifications go on to meet all 10 CAB carcass specifications. In 2024, 82% of Angus-influenced cattle didn't have enough marbling (CAB Consist Study).

While cattle may not qualify for CAB for missing multiple carcass specifications, the greatest opportunity to increase the amount of Angus-influenced cattle that qualify for CAB are those that barely miss the marbling requirement.

Evaluating the marbling distribution of Angus-influenced cattle provides a clearer picture of the portion of the population

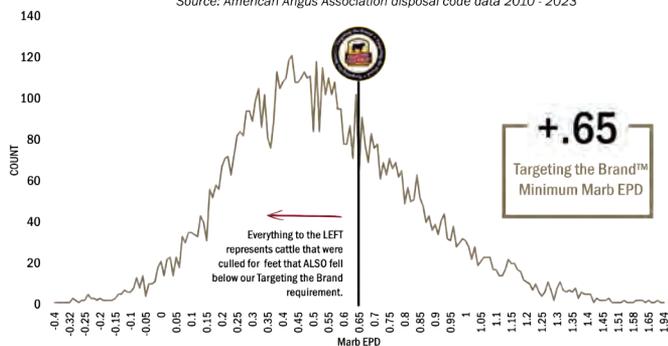

SOURCE: 2024 CAB Consist Study, 2.1 M Head

Carcasses must score 500+ for marbling to qualify for Certified Angus Beef® brand.

Marbling EPD Distribution on Cattle Culled for Feet

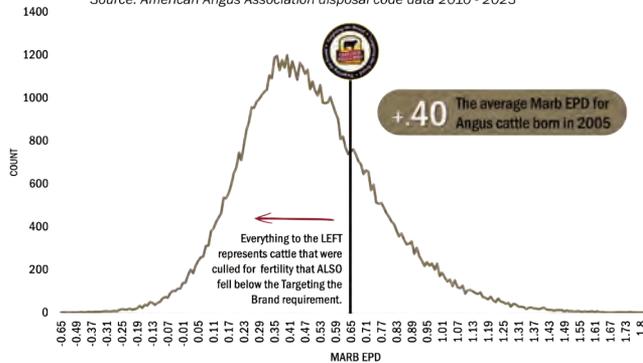

Source: American Angus Association disposal code data 2010 - 2023

From 2010 to 2023, more than 7,600 cows, bull, and calves were culled for foot issues. Many culls fall below the black line representing the Targeting the Brand minimum requirement for Marb EPD (+0.65).

Marbling EPD Distribution on Cattle Culled for Fertility or Open

Source: American Angus Association disposal code data 2010 - 2023

From 2010 to 2023, more than 72,000 females were culled from the herd due to being open or having other fertility issues. Many culls fall below the black line representing the Targeting the Brand minimum requirement for Marb EPD (+0.65).

that falls short of CAB's marbling threshold. Just over 10% of our missed supply is within only 30 points of marbling. Moderate improvements in marbling can still leave room for improved selection across multiple traits while making meaningful strides in product quality.

The data proves that marbling should still be a priority. But additional data shows that it doesn't have to be your only priority.

Are marbling, feet and fertility related?

Another common question from cattle country: Has our breed been so focused on marbling that we've lost sight of other valuable traits? Specifically, feet and fertility are recent areas of concern.

In search of answers, CAB worked alongside the American Angus Association® (Association) team to identify genetic trends between fertility and feet issues and the culled animals' Marb EPDs. The Association provided all disposal code records from the Angus Herd Improvement Records (AHIR) database for both fertility and feet from 2010 through 2023. AHIR offers valuable insights into the primary reasons cattle were removed from a herd.

In both cases, there was a normal distribution of animals culled—indicated by the bell-shaped curve. The real lessons become visible when we draw lines at the marbling threshold for Targeting the Brand™.

For several years, CAB has published Targeting the Brand™ requirements for Marb EPD and Grid Value (\$G) Index to help commercial customers easily identify registered Angus animals with added genetic carcass value. The minimum genetic requirement thresholds are +0.65 Marb EPD and +55 \$G.

The most cattle culled for feet and fertility fall below +0.65 for marbling. Incidentally, the 2025 breed average for current sires was +0.64. While there are cattle with very high marbling values culled from herds due to feet or fertility problems, the whole picture shows that many of those culled cattle are not considered elite for carcass qual-

ity. Moreover, this data shows that recent improvements in Marb EPDs aren't to blame. In both disposal codes, the bulk of the curve peaks at around a +0.40 Marb EPD, which was the average for Angus cattle born in 2005.

Perhaps improvement in quality doesn't rely on extremes.

Simultaneous improvement

Cattlemen and women have a responsibility to look critically at their own herd, determine the areas that warrant improvement, and cull animals accordingly. Stockmen bring immense value by objectively evaluating phenotypes, regardless of what the numbers say, and setting individual breeding objectives.

When evaluating EPDs and considering what you're breeding for, you must first recognize your environmental needs. Second would consider resources (labor, land availability, etc.) at your disposal. Third are your marketing goals and, just as important, your customers' marketing goals.

For cattle producers who have goals of increasing their CAB acceptance rates, Targeting the Brand™ is a data-driven selection tool that helps bull and female customers more easily identify registered Angus animals that will help them achieve a 60% CAB acceptance rate, whereas the 2025 CAB acceptance rate (not exclusive to those utilizing Targeting the Brand™) averages 37%.

Some Angus breeders or their customers' breeding objectives are higher than CAB acceptance and focus on increasing the number of cattle that grade USDA Prime. In 2025, the industry average Prime acceptance rate was around 11%. If you manage an average commercial cow herd under average management and environmental conditions, then data suggests registered Angus bulls with a +1.10 Marb EPD and +72 \$G have more potential to achieve a 20% Prime acceptance rate.

As you're making mating decisions for your next breeding season or headed to purchase new herd bulls, there's space to put emphasis on marbling without excluding other valuable traits for your operation.

PRIME ON PURPOSE

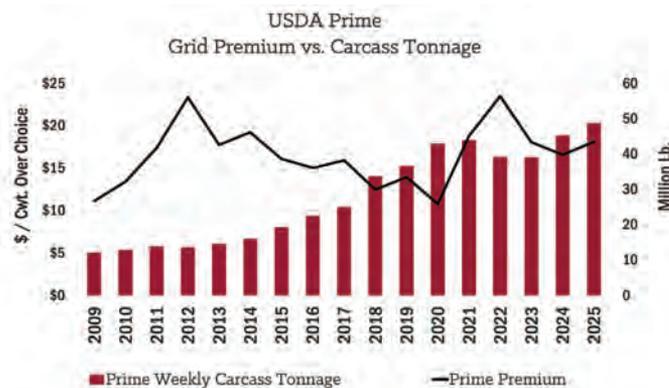

Targeting higher marbling scores boosts profitability and satisfies growing consumer demand. Genetics play a critical role in marbling performance, although several factors influence carcass quality. With a heritability of 0.48, marbling is one of the most highly heritable traits measured by the American Angus Association. More marbling progress can be made in one generation of genetic selection than in most other traits.

To improve the likelihood that your calf crop will achieve a 60% Certified Angus Beef (CAB) acceptance rate, use registered Angus bulls that carry the Targeting the Brand™ logo, signaling that the animal meets the minimum genetic requirements of +0.65 Marbling (Marb) EPD and +55 dollar grid (\$G) index.

The industry average CAB acceptance rate is 37%. While the acceptance rate continues to rise annually, carcass quality also continues to stretch from upper two-thirds Choice to Prime.

Barely more than a decade ago, Prime was often seen as an exception in carcass performance. Current data proves that achieving Prime is practical and attainable. In 2025, USDA Prime averaged 12%, while a record 13.7% of all CAB carcasses were CAB Prime. That's a 3.6% increase in a year when total certified head counts were down. Since 2020, more Prime carcasses have provided a consistent supply for Prime beef in grocery stores.

Consumers vote with their dollars. Despite historically high prices at retail, USDA and Terrain data show Prime beef demand has risen 20% year-over-year, while Choice demand stays just under the same threshold.

Quality grid premiums are higher, too. From September 2024 to August 2025, the USDA Prime premium averages reached \$289.54 per head, CAB averaged \$135.24, and Choice followed at \$90.80 compared to the weekly cash average.

The data-driven approach to carcass grading and marketing helps you reduce variability and capture more premiums. Achieving Prime pays off, and genetics can help you hit your quality goals faster.

A collective data analysis effort between CAB and Angus Genetics Inc. (AGI) sets a baseline to target a 20% Prime acceptance rate. Based on an average Angus-based commercial cow herd, one recommendation assumes average management and environmental conditions according to the World Angus Evaluation, while the other assumes the cows are under below average conditions.

Producers should always evaluate their own benchmarks, breeding objectives, and environment and apply balanced selection accordingly. For those with an eye on Prime, these guidelines may serve as a helpful tool.
