BEEF EVALUATION
PROGRAM**

BULL TEST AND BULL SALE

Saturday, April 18, 2026

MORE BULL FOR YOUR BUCK ... PERFORMANCE TESTED, RANCH READY

On behalf of the Indiana Beef Evaluation Program (IBEP) and its cooperators who entered bulls in the 2025 Winter Performance Test, we invite you to the **97th Indiana Beef Evaluation Program Performance Tested Bull Sale Saturday, April 18, 2026, starting at 1 pm (EDT) in Springville, IN at the Springville Feeder Auction Market.**

The IBEP has a history of being a strong Performance Test with a critical eye for traits that matter to cattlemen and cattlemen: *Structure, Functionality, and Breeding Soundness*. The test continues these time-proven points of evaluation that mean so much to the Indiana and Midwestern bull buyer.

Since 1976, the cooperative effort of the IBEP Board of Directors, Indiana Beef Cattle Association and Purdue University's Department of Animal Sciences, Cooperative Extension and School of Veterinary Medicine have performance tested and evaluated 13,204 bulls and 1,446 get-of-sire groups between a summer and winter performance test. Most bulls in each test are consigned by herds from Indiana and states bordering Indiana, most being in the heart of the "fescue belt."

We are entering a new era of outreach to the most critical evaluators of bulls across the country. With several breeds represented, the opportunity to compare and contrast couldn't be more convenient. Allow these bulls the opportunity to prove their merit and come work for you.

Bulls that make the Sale represent the top 2/3 for performance index among 163 bulls tested. They have passed what we believe is one of, the most, rigorous evaluations in the country for disposition, structural soundness, and breeding soundness. Bulls are confirmed negative for all lethal genetic defects and BVD; and all gestating dams have tested negative for Johne's since the birth of the bull. In addition, cooperators have invested in genomic enhanced EPDs and parent verification of the sire and dam on ALL bulls in this offering.

Make no mistake, IBEP takes proper development of bulls seriously during the performance test. Although gain is what is rewarded, it cannot come at the cost of a bull notwithstanding the transition to his next role in working for you as a herd sire. Bulls are developed on a high forage diet to obtain a moderate rate of growth that allows differences in genetic potential for gain to be expressed.

Data collection is a commitment, it's not always convenient and it's not always pleasurable; however, IBEP has always been and will always be, committed to collecting accurate and necessary data for you to make a sound decision on your next herd sire. In addition to the information provided in this catalog, "sortable" percentile tables for select EPDs and Indexes are available at the

IBEP website: <https://purdue.ag/ibep> or by utilizing the QR code to the right.

Bulls are available for viewing at **ANY TIME** at the IBEP Bull Test Station, located at the Feldun Purdue Agriculture Center, up until the day of the sale. On Sale Day, bulls will be on site at the Springville Feeder Auction Market in Springville, Indiana. In addition, you can view bulls and bid online at **www.CCI.live**.

Questions related to IBEP, or the Sale can be directed to the coordinator, directors and personnel listed on the inside back cover. Questions about bulls should be directed to the respective bull owner. Bull owner's contact information is listed on each respective lot.

Sincerely,
IBEP Board of Directors

IBEP BULL TEST STATION

Feldun Purdue Agriculture Center
1117 State Road 458 • Bedford, IN 47421 • 812-279-4330

97th INDIANA BEEF EVALUATION PROGRAM

BULL TEST AND BULL SALE Saturday, April 18, 2026

SALE LOCATION

Springville Feeder Auction Market – Springville, IN
4426 State Road 54 W Springville, IN 47462
(10 miles Northwest of Bedford, IN)

SALE SCHEDULE

(All times eastern time)

SATURDAY, APRIL 18, 2026

97th IBEP Bull Sale

10:00 AM Bulls ready for viewing at Springville
Doughnuts and coffee provided
11:00 AM Lunch provided
1:00 PM **97th IBEP Bull Sale**

SALE DAY PHONE NUMBERS

Nick Minton..... 812-797-7944

AUCTIONEER

Mike Berger 574-850-5605

BIDDING

All bulls will be sold to the highest bidder. The auctioneer will settle all disputes as to bids, and his decision will be final.

AUCTION - VIEWING AND BIDDING

Attend in person

CCi.LIVE..... Brooklyn Graham 812-530-0748

Absentee Bidding.....Nick Minton - 812-797-7944
Contact by 10:00 AM, April 18, 2026.

BULL VIEWING

Bulls may be viewed at any time at the IBEP Test Station up until Sale Day. On sale day, bulls will be available for viewing after 10 AM at the Springville Feeder Auction Market.

NOTE: Bulls will be brought into the auction ring during the auction with their video displayed simultaneously.

LODGING

Holiday Inn Express & Suites - Bedford, IN – 812-279-1206
Hampton Inn – Bedford, IN – 812-902-2600

TERMS

Terms are cash. Checks should be made payable to **Indiana Beef Evaluation Program** or **IBEP**. All bulls must be paid for at the sale and before loading. All bulls are seller's risk until sold and buyer's risk as soon as sold. Announcements made from the auction block will take precedence over the printed material in this sale book.

LIABILITY

All persons attending the sale or viewing bulls at the Indiana Beef Evaluation Program Test Station do so at their own risk. Neither the Indiana Beef Evaluation Program, Purdue University, Springville Feeder Auction Market, nor any person connected with the sale will assume any liability, legal or otherwise in case of accidents.

BREEDING GUARANTEE

Bulls selling for \$5,000 or more have a breeding guarantee that consists of the bull being a functional breeder. The guarantee does NOT cover mismanagement or death. The guarantee for the bull will be reimbursement for the purchase price less \$2,500. Salvage value will go to the buyer. For example, if a bull that sells for \$5,000 is deemed 'non-functional' the purchaser would get back \$2,500 (\$5,000 purchase price less the \$2,500; and the purchaser will keep the salvage value). Any issues shall be handled between the buyer and the seller.

Any 'non-functional' bull must be diagnosed by a veterinarian with a written report from the veterinarian and provided to the producer, and the producer contacted prior to salvage. The guarantee does not include death loss. All claims must be submitted to the producer prior to **October 30, 2026**.

Any breeding guarantee or terms and conditions endorsed by respective breeding associations is between the buyer and seller on bulls that sell for less than \$5,000.

Neither the Indiana Beef Evaluation Program, Purdue University, nor other persons associated with the sale will assume any liability, legal or otherwise.

Mortality Insurance will be available sale day.

SOUNDNESS

All bulls have passed a breeding soundness exam on March 19, 2026, and a committee assessment for structural soundness and disposition on March 9, 2026.

MINIMUM BID

Each bull will be sold at a minimum of \$4,000. The IBEP board reserves the right to adjust the minimum bid based on changes in market prices between the time of printing of this catalog and the sale. Those bulls not receiving the minimum bid will remain the property of the consignor.

SALE ORDER

Bulls are cataloged in the order they will sell. Sale order is based on their Sale Index with the highest Sale Index selling first and descending in order of Sale Index from there. Ties in Sale Index are decided by On-Test Performance Index. Please see page 4 for detailed information on Sale Index.

REGISTRATION AND TRANSFER

Certificates of registry will be transferred to the buyer by the seller within a reasonable time period after the sale at the seller’s expense.

HEALTH

All bulls met the health requirements established by the IBEP veterinarians prior to arriving at the test station. All dams (gestating) of bulls have tested negative for Johnes between the time the bull was born and his arrival to the IBEP Test Station. Between two months and three weeks prior to delivery to the IBEP Test Station, bulls were vaccinated against: Leptospirosis, IBR, BVD, PI3, BRSV, haemophilus somnus, Pasteurella, and clostridial organisms (7-way vaccine for black leg, malignant edema, overeating disease, etc.). All bulls were tested at delivery for persistent BVD and were confirmed negative. All bulls tested negative to tuberculosis and brucellosis tests within 30 days of the sale. Official Certificates of Veterinary Inspection will be furnished to out of state buyers prior to loading.

INSURANCE

Is the responsibility of the buyer immediately after purchase. If needed, please contact Jame Krieger, with American Livestock on or before the Sale.
Jame Krieger..... 812-208-0956

LOADING

Bulls will be loaded out following the conclusion of the sale and after payment has been made and received at the Sale office. If not convenient for buyer to remove their bull(s) the day of the sale, bulls will be cared for until 12:00 pm (noon) on Monday-April 20, 2026 but at the buyer’s risk of injury or loss. If bulls are transported back to the IBEP Test Station post sale, there is no guarantee bulls will not be comingled with other bulls.

TRUCKING

IBEP will assist in coordinating trucking within and outside the state of Indiana. Please contact the IBEP Test Station or Nick Minton ahead of the Sale if you believe you may need trucking so that we can develop the plan and provide you a price on trucking.

IBEP Test Station 812-279-4330
Nick Minton..... 812-797-7944

PERFORMANCE TEST RULES & REGULATIONS

Rules for this 2025 Winter Performance Test and 97th sale was the responsibility of the IBEP Board of Directors. The performance test was conducted at the IBEP Test Station located on the Feldun-Purdue Ag Center in Bedford, Indiana. Bulls were fed a total mixed ration once daily. The diet was no less than 50% dry matter in forage (0.74 Mcal/lb NEm; 0.46 Mcal/lb NEg). The forage base consisted wheat silage, sorghum silage and corn silage. Other ingredients included corn, soybean hulls, corn gluten feed, dried distiller’s grains with solubles, rumen protected by-pass protein supplement, trace-mineral and vitamin supplement and an ionophore. Diets are formulated and fed in a manner that allows bulls to achieve moderate levels of growth to display differences in genetic potential for bodyweight gain and carcass merit without compromising the bulls ability to be a successful breeder in the pasture.

Bulls were delivered October 28, 2025, on-test November 26, 2025, and off-test March 16, 2026.

Bulls must have met the following requirements to sell:

- ✓ Top Performance Indexing of breed group
- ✓ Parentage verified through DNA to sire and dam
- ✓ Passed structural soundness evaluation
- ✓ Passed disposition evaluation
- ✓ Passed breeding soundness exam
- ✓ Genomic Enhanced EPDs through DNA
- ✓ BVD negative
- ✓ Brucellosis and Tuberculosis negative
- ✓ Gestating dam negative for Johnes’s Disease

Watch the Sale on CCI.live!

The best, the fastest and most comprehensive marketing & bidding tool!

How to Bid Online...

- **As a buyer**, you do not need an account or to login to watch the sale but you must have a validated account to bid.
 - After you are logged in, you must proceed to the sale page for any and every auction and click **"Get Buyer Number."** Some auctions require a pass-code to obtain a buyer number even after you are approved by CCI.live. Pass codes generally come from the sale manager or ranch for that particular sale.
 - CCI.live will operate with ease on a **cellular device, laptop, desktop or tablet.**
- A **modern or current browser** is important and will make your experience better. You do not need to install the app on cellular devices to watch a sale. CCI.live is a browser-based application meaning it will play on most new browsers, but you can also download the CCI.live app at the Apple App Store or through Google Play.
- **For successful bidding you must have good Internet service!** It is very important to be stationary. If you are driving and bidding, expect to have some service issues. If you are stationary on a good device, with healthy Internet, expect a very successful bidding environment. If you have slow Internet watch the "asking price" on the screen - it is real time and refresh your browser if you feel like you have some lag.
- **Support line open during all sales. 405-400-9505** - Please contact the ranches for invoices and trucking.

Viewed around the world!

**SALE CATALOG, VIDEOS,
and LIVE BROADCAST...**

all at your fingertips from the sale page at www.CCI.live! Watch live sales weekly!

ID INFORMATION

EAR TAG: Bull's visual identification ear tag at IBEP Test Station.

DOB: Bull's actual date of birth.

REG. #: Bull's official registration number with the breed association (American Angus Association, American Hereford Association, American Simmental Association, etc.). This number can be searched on the breed association's website.

TATTOO: Permanent form of identification, registered with the breed association.

DIVISION: Age division within each IBEP Test. Senior Division bulls were born October 1, 2024 through December 31, 2024. Junior Division bulls were born January 1, 2025 through April 1, 2025.

BREED COMPOSITION: Purebred or percentage of breeds represented in the bull's pedigree.

PEN #: Pen at the IBEP Test Station in which that bull is housed.

FARM NAME AND LOCATION: Bull's owner with town and state of residency.

FARM PHONE NUMBER: Contact number for the bull owner.

DATA RECORDED ON-FARM

HORN STATUS: Indicates if the bull is a carrier for the recessive horned allele.

COLOR STATUS: Indicates if the bull is a carrier for the recessive red allele.

ACT BW: The bull's actual recorded birthweight.

ADJ WW/RATIO: The 205-day weight adjusted for the age of the dam. The ratio is the weight expressed as a percent of the average; this was determined within herd and not within breed at the IBEP.

WW CONTEMP.: The number of calves of the same sex born within 90 days of each other which have been managed the exact same way, making them weaning contemporaries.

DAM AGE: The dam's age at calving.

DATA MEASURED AT IBEP

PERF. INDEX: This is the IBEP Performance Index = .60(ADG Ratio)+.40(WPDA Ratio). In this example, the index is .60(106)+.40(108) = 106.59, indicating that his combined performance was 6.59% above the breed average. Bulls with higher indexes should add more growth potential to calves than bulls of the same breed with lower indexes. Calves with more genetic potential for growth should be heavier at weaning, gain faster in the feedlot, reach an acceptable harvest weight at a younger age, and be more profitable.

A NOTE ON RATIOS: Ratios for traits compare the bull to others of his breed in this test. If there are fewer than 6 bulls of that breed, the ratio is based on the trait average for all bulls in the test.

WEIGHT: The bull's most recent weight recorded or the official off-test weight of the bull.

ADG/RATIO: The Average Daily Gain of the bull during the 125-day test. The ratio compares the ADG to the breed average. A ratio of 106 indicates the bull gained 6% faster than the average of his breed in this test.

WDA/RATIO: The Weight Per Day of Age at the time of off-test. The ratio compares the WPDA to the breed average. A ratio of 108 indicates the bull was 8% heavier per day of age than the average of his breed on test.

ACT FRAME: The frame score at the time of off-test. The formula used by IBEP is that reported by the Beef Improvement Federation (BIF) for 5 to 21-month-old bulls. Frame Score = -11.548 + (0.4878 x Hip Ht.) - (0.0289 x Age) + (0.0001947 x Age²) + (0.0000334 x Hip Ht. x Age), where Age = days of age. As noted by BIF, this calculation was based on recorded measurements of beef cattle in the 1970s. Based on genetic progression since this time, this formula may no longer be accurate. See <https://beefimprovement.org/> for more information.

ACT CLW/ANG: Actual claw and foot angle scores assigned to the worst hoof by the IBEP structural soundness committee, utilizing the *Foot Score Guidelines* published by the American Angus Association. Scores range from 1 to 9, with 5 being ideal. See "Soundness and Foot Score Evaluations" below for more details.

ACT SC/ADJ SC: The actual (Act) and adjusted (Adj) scrotal circumference, in cm, at the end of the test.

THE ADJUSTMENT IS TO 365 DAYS OF AGE.

% RETAIL/RATIO: This is the % Retail Product, which is estimated as 65.59 - 9.931*(Rib Fat) + 1.2259*(Rib Eye Area) - 0.013166*(Carcass Weight) - 1.29*(KPH). Rib Fat and Rib Eye Area are adjusted to 365 days of age. Carcass Weight was estimated as .60*(365-day Weight); if the breed association does not adjust ultrasound information to 365 days of age, the weight at scanning is used instead of 365-day weight. A KPH (kidney, pelvic and heart fat) value of 2.0% was used for all bulls. The ratio compares the % retail product to the breed average. A ratio of 98 indicates the bull is estimated to have 2% less % retail product than the average for his breed in this test. The % retail product is heavily influenced by rib fat thickness and rib eye area, and highly related to carcass Yield Grade.

Lower rib fat thickness and larger rib eye area result in greater % retail product. Comparing within a breed, bulls with higher % retail product values should sire calves with carcasses having more desirable Yield Grades than bulls with lower % retail product values.

ADJ % IMF/RATIO: The % intramuscular fat (IMF) is a measure of marbling, which is one of the major factors influencing carcass Quality Grade. It is measured by ultrasound and adjusted to 365 days of age. Comparing within a breed, bulls with higher % IMF should sire calves with a higher % IMF, and therefore a higher carcass Quality Grade, than calves sired by bulls with lower % IMF. The ratio compares the % IMF to the breed average. A ratio of 106 indicates the bull had 6% more % IMF than the average of his breed in this test.

ADJ RE/RATIO: Rib Eye Area is measured by ultrasound at the 12th rib, and adjusted to 365 days of age. Breed-specific adjustments are used.

The Relationship between % Intramuscular Fat and USDA Grade and Marbling Description		
% IMF	USDA Grade	Description
9.9+	Prime	Slightly Abundant
4.0 – 9.7	Choice	Small
2.3 – 3.9	Select	Slight
<2.3	Standard	Traces
Adapted from <i>How to Read A Scan</i> . S. McGrath. Centralized Ultrasound Processing.		

A ratio of 103 indicates the bull had a 3% larger RE than the average of his breed on test.

ADJ RE/CWT: The adjusted Rib Eye Area expressed per hundred pounds of live weight. The 365-day weight is used as the live weight measurement; if RE is not adjusted to 365 days, the weight at scanning is used.

ADJ. RIB FAT/RATIO: Rib fat, also referred to as backfat, is measured at the 12th rib, and adjusted to 365 days of age. A ratio of 171 indicates the bull had 71% more rib fat than the average of his breed on test.

NOTE: ^ Denotes that the breed association does not adjust this ultrasound information (IMF, RE, Rib Fat) to 365 days of age, so this is the actual record (unless otherwise specified)

CARCASS MERIT: This is calculated as (% Retail Product Ratio + % Intramuscular Fat Ratio)/2. In this example, the carcass merit is $(106+98)/2 = 101.93$, indicating that his carcass merit is 1.93% above the breed average (ratios were rounded to integers for display in the catalog). Carcass merit is an attempt to provide an indicator of both carcass Quality Grade and carcass Yield Grade. Ideally, we would prefer bulls that were above average in both % retail product and in % IM fat. However, this is not always possible. Producers whose calves tend to have less than desirable Quality Grades need to place greater emphasis on % IM fat, while those with calves that tend to have poor Yield Grade (i.e., few Yield Grade 1 and 2 with some Yield Grade 4) need to place greater emphasis on % retail product.

DISPOSITION:

IBEP implements a pen disposition evaluation where bulls are brought into an evaluation pen individually with humans in the pen.

SALE INDEX: This is a weighted sum of the number of stars for six traits. Traits included are: 30% ADG, 20% WPDA, 7.5% IMF, 7.5% REA/cwt, 20% Calving Ease Direct EPD, and 15% Weaning Weight EPD. The maximum Sale Index for a bull is 100.0.

Pen Disposition Evaluation		
Score	Disposition	Description
1	Non-Aggressive (docile)	Walks slowly, can be approached by humans, not excited by humans or facilities
2	Slightly Aggressive	Runs along fences, will stand in corners if humans stay away, may pace fence
3	Moderately Aggressive	Runs along fences, head up and runs away if humans move closer, will stop before running into gate or fences
4	Aggressive	Stays at the back of the group, head high and very aware of humans, may run into fences and will likely run into fences if alone in a pen
5	Very Aggressive	Excited, runs into fences and over humans or anything in their path, "crazy"
Adapted from Beef Improvement Federation Pen Scoring Guidelines.		

Number of stars is related to the decile ranking of the bull for that measured trait or EPD. A bull in the top 10% received 10 stars, the top 20% received 9 stars, and so on. For EPDs, this uses the breed association's percentiles for non-parent bulls (see the "EPD" description below). For traits measured during the test, the bull is compared to others of the same breed; if there are fewer than 6 bulls of that breed, the bull is compared to all bulls in the test.

EPDS AND \$ INDEXES

EPD: EPDs (Expected Progeny Difference) are given for several traits. Production traits: Direct Calving Ease (CED,CE), Birth Weight (BW), Weaning Weight (WW), Yearling Weight (YW), Docility (DOC), Scrotal Circumference (SC), Yearling Height (YH), Dry Matter Intake (DMI), Residual Average Daily Gain (RADG), and Average Daily Gain (ADG). Maternal traits: Milk (MILK,MM,MK), Maternal Calving Ease (CEM,MCE), Heifer Pregnancy (HP,HPG), Udder Suspension (UDDER,UDDR), Teat size (TEAT), Sustained Cow Fertility (SCF), and Stayability (STAY,STY,ST).

Carcass traits: Carcass Weight (CW,CWT), Marbling (MARB,MRB,MB), Rib Eye Area (RE,REA), Backfat (FAT,FT,BF), Yield Grade (YG), and % Retail Cuts (RET). Exact traits, and abbreviations for trait names, will be different for each breed.

All bulls in this catalog have genomic-enhanced EPDs, meaning their pedigree and performance information has been refined by DNA data, which increases the accuracy of the EPD. For some EPDs, DNA can increase EPD accuracy as much as phenotypic data would on a first calf crop.

It is only valid to compare EPDs of bulls within the same breed. Do not compare EPDs of bulls in different breeds unless the EPD has an "Across-Breed EPD Adjustment Factor". These are published by the U.S. Meat Animal Research Center (USMARC) and are available at <https://beefimprovement.org/>

EPDs are reported with a %, which comes from the breed association. This is a percentile ranking which compares the bull to other non-parent bulls in their entire breed, not just the bulls in this test. An EPD with a percentile ranking of 50% would be considered breed-average. In this example, the bull's CED EPD of +10 has a percentile ranking of 20%, so the bull is in the top 20% of non-parent bulls in the Angus breed for Direct Calving Ease. His MARB EPD of +.45 has a percentile ranking of 75%, so the bull is in the top 75%, or bottom 25%, of non-parent Angus bulls for Marbling. "Non-parent" means young bulls that have not sired a calf crop with progeny data submitted to the breed association.

\$ INDEXES: These are multi-trait selection indexes calculated by many breed associations. These combine EPDs for several traits into a single economic value, which can be used to make selection decisions. Typical beef production and economic values are used in calculating the indexes. Indexes are expressed in dollars per head, and higher indexes mean a higher dollar value per head. The index values are interpreted like EPDs; the difference in index value between two bulls is the expected difference in average dollar value per head of their progeny, when the bulls are bred to similar cows. An index value only

has meaning when it is compared to the index value of another animal of the same breed. Currently, indexes are calculated for Angus, Gelbvieh, Gelbvieh Balancer, Hereford, Limousin, Red Angus, Shorthorn, Simmental, and SimAngus bulls.

Angus indexes are Maternal Weaned Calf Value (\$M), Weaned Calf Value (\$W), Feedlot Value (\$F), Grid Value (\$G), Beef Value (\$B), and Combined Value (\$C).

Charolais index is Terminal Sire Index (TSI).

Gelbvieh indexes are Total Maternal (TM), \$Cow, Efficiency Profit Index (EPI), and Feeder Profit Index (FPI).

Hereford indexes are Baldy Maternal Index (BMI\$), Brahman Influence Index (BII\$), and Certified Hereford Beef Index (CHB\$).

Limousin index is Mainstream Terminal Index (\$MTI).

Red Angus indexes are Profitability and Sustainability Index (ProS), HerdBuilder Index (HB) and GridMaster Index (GM).

Shorthorn indexes are Calving Ease Direct (\$CEZ), British Maternal Index (\$BMI), and Feedlot (\$F).

Simmental and SimAngus indexes are All-Purpose Index (API) and Terminal Index (TI).

For more information about EPDs, \$ Indexes, and their interpretation, see article "EPDs and \$ Indexes" under "FAQ & Info" on the IBEP website (<https://purdue.ag/ibep/>).

COMPARING EPDS FOR DIFFERENT BULLS:

Bull A	Bull B	Name of EPD
CED	CED	EPD / Percentile ranking for the EPD
+7/45%	+12/40%	

The difference between their CED EPDs is 12 - 7 = 5, or 5%.
 If Bull A and Bull B were bred to the same group of heifers, we would anticipate calves sired by Bull B to require assistance at birth 5% of the time less than those sired by Bull A.
 The actual number of calves requiring assistance at birth between Bull A and B based on this percentage difference is dependent upon the number of heifers bred.
 10 heifers x 5% = 0.5 calf, so we would anticipate that there would essentially be no difference in number of assisted births between these two bulls given the number of heifers being bred.
 20 heifers x 5% = 1 calf. Between Bull A and Bull B if mated to the same 20 heifers we would anticipate having to assist with one more birth from Bull A compared to Bull B.

SOUNDNESS AND FOOT SCORE EVALUATIONS

The IBEP board of directors accepted the motion in December of 2019 to utilize the *Foot Score Guidelines* published by the American Angus Association to score hoof angle and claw set on every bull on test. A diagram of the guidelines is shown below. Scores of 1 and 9 are considered "unsound", and scores of 2 and 8 are considered "marginally unsound". A score of 5 is considered an ideal score.

The structural soundness committee consists of three to five individuals that do not own a bull currently on test. As a committee, they discuss each bull and come to an agreement on the foot angle, claw set score, and whether or not each bull is eligible for sale based on structural soundness and disposition.

IBEP CATEGORIES:

Multi-Trait and Growth/Carcass:

Acceptable: Top 50% to top 25% of the breed

Elite: Top 25% of the breed

Heifer Acceptable: Established based on required CED requirements for natural service sires to be acceptable for use in the University of Missouri's Show Me Select Heifer Program.

Heifer Acceptable criteria determined by the long-time data driven program requirements for Missouri's Show Me Select Heifer Program (<https://extension.missouri.edu/programs/show-me-select-replacement-heifer-program>).

Minimum Calving Ease EPD Requirements for Natural Service Sires

	2026 Show Me Select Requirements
Angus	7.0
Balancer	14.0
Hereford	7.0
