

*Rimrock Production Presents...*

# **GENOMIC GEMS VOL. X**

**TUESDAY | MAY 5, 2026 | 6 P.M. CDT**

**GIDDINGS, TX**

# Welcome!

Hello Everyone,

Welcome to Rimrock's tenth annual Genomic Gems sale. We believe although this is a small offering it is stacked with females which are the "complete package" combining phenotype and genotype.

The focus of the Rimrock program is to always strive to build the "complete package." It is always positive to have EPDs in the top of the breed, but we strongly believe regardless of what's on the paper it is a necessity for our cattle to be sound, functional, and outperform their EPDs and perform in the pasture.

Currently everyone in the cattle industry is blessed with an exceptional market, which I personally hope stays in place for years to come. But that is not a reason to lose focus on the end goals of performance and carcass quality. I believe this offering expresses what is important to the current and future market.

The two donor females leading off the sale will be missed in our program as they have made substantial contributions to the Rimrock herd. The 206 cow has done everything we have asked of her, and we have an exciting calf crop in this offering and others on the way. Parker and I debated on whether to sell 100% or just half. After much debate we landed on 50% with the option to double and let the new owner make the decision for us. 09100 is a descendant of the Y05C female which has impacted the Rimrock program for years and continues to do so at 15 years of age. Talk about the definition of longevity. 4934 the daughter of 09100 is a great example of the "complete package". She not only looks the part but ultrasounded a 13 for IMF and ribeye. I do believe the genetics of both Y05C and SuperMama expressed themselves in this young female. She has the potential to make an impact on any program's donor pen.

I could expand on every female in the offering but would rather you personally evaluate the females and develop your own opinion. Lane and I will gladly answer any questions or provide additional information to assist you in your evaluation.

The sale will be in the Live Online format with CCI, but if anyone would like to come and evaluate the cattle you are always welcome to come out to the ranch.

Thanks for considering the females in the offering and don't hesitate to call if you need anything.

Bryan, Jonell and Family

The only dam in the breed sired by the legendary Pathfinder sire Mill Brae Identified that possesses her unique combination of WW, YW, Claw, Angle, Marb, RE, and \$M. This female is a full sister to the ABS Global sire 4 Sons Logical and the \$75,000 valued selection of Cigar City in the 2022 4 Sons sale. This super impressive female is loaded with performance on paper and on the hoof, and she is absolutely beautifully designed, massive topped, long spined and deep sided. This is the kind that you want in the pastures. She has been flushed 6 times conventionally to average 15 transferable embryos and had 2 IVF cycles for an average of 7 transferable embryos. This female is super special.

## Watch the Sale on CCI.live!

The best, the fastest and most comprehensive marketing & bidding tool!

### How to Bid Online...

- As a **buyer**, you do not need an account or to login to watch the sale but you must have a validated account to bid.
  - After you are logged in, you must proceed to the sale page for any and every auction and click **"Get Buyer Number."** Some auctions require a pass-code to obtain a buyer number even after you are approved by CCI.live. Pass codes generally come from the sale manager or ranch for that particular sale.
  - CCI.live will operate with ease on a **cellular device, laptop, desktop or tablet.**
- A **modern or current browser** is important and will make your experience better. You do not need to install the app on cellular devices to watch a sale. CCI.live is a browser-based application meaning it will play on most new browsers, but you can also download the CCI.live app at the Apple App Store or through Google Play.
- **For successful bidding you must have good Internet service!** It is very important to be stationary. If you are driving and bidding, expect to have some service issues. If you are stationary on a good device, with healthy Internet, expect a very successful bidding environment. If you have slow Internet watch the "asking price" on the screen - it is real time and refresh your browser if you feel like you have some lag.
- **Support line open during all sales. 405-400-9505** - Please contact the ranches for invoices and trucking.

### Viewed around the world!

**SALE CATALOG, VIDEOS, and LIVE BROADCAST...**  
all at your fingertips from the sale page at [www.CCI.live](http://www.CCI.live)! Watch live sales weekly!

3 IVF embryos by one of the hottest sires in the breed, RSA True Balance, and the dam of the \$230,000 valued Bullington Cattle, 909 Ranch and Byrd Cattle donor, Rita 0237, who is the dam of the legendary \$1 million valued FF Rito Hustler and the record setting FF Rito Ambitious. This genetic combination has unlimited potential here, folks. A guarantee of 1 pregnancy if work is performed by an approved technician.

RMRK Rita 8232 - Dam of Lot 10

# AAA Selection Tools

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

## PRODUCTION EPDs

**Calving Ease Direct (CED)**, is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

**Birth Weight EPD (BW)**, expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**Weaning Weight EPD (WW)**, expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**Yearling Weight EPD (YW)**, expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

**Scrotal Circumference EPD (SC)**, expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

## MATERNAL EPDs

**Heifer Pregnancy (HP)**, is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction and the EPD is reported in percentage units.

**Maternal Milk EPD (Milk)**, is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

**Teat Size EPD (Teat)**, expressed in units of teat size score, with a higher EPD indicating a sire will produce daughters with smaller teat size compared to that of other sires' daughters.

**Udder Suspension EPD (UDDR)**, expressed in units of udder suspension score, with a higher EPD indicating a sire will produce daughters with tighter udder suspension compared to that of other sires' daughters.

**Functional Longevity EPD (FL)**, expressed in number of calves, is a predictor of the number of calves a sire's daughters are predicted to produce by 6 years of age compared to that of other sires' daughters. A higher EPD is the more favorable direction indicating more calves produced on average.

**Cow Energy Value (\$EN)**, expressed in dollar savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

## MANAGEMENT EPDs

**Claw Set EPD (Claw)**, is expressed in units of claw-set score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal claw set. The ideal claw set is toes that are symmetrical, even and appropriately spaced.

**Foot Angle EPD (Angle)**, is expressed in units of foot-angle score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal foot angle. The ideal is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

**Hair Shed EPD (HS)**, is expressed in units of hair shed score, with a lower EPD being more favorable indicating a sire should produce progeny who shed their winter coat earlier in the spring. Selection for this trait

should improve the genetic potential for a sire's progeny to shed off earlier increasing the environmental adaptability of cattle living in heat stressed areas and producers grazing endophyte-infected (hot) fescue.

## CARCASS EPDs

**Carcass Weight EPD (CW)**, expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

**Marbling EPD (Marb)**, expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

**Ribeye Area EPD (RE)**, expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

## \$VALUE INDEXES

**\$Value indexes**, an economic selection index allows multiple change in several different traits at once pertaining to a specific breeding objective. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if the sires were randomly mated to cows and if calves were exposed to the same environment.

**Maternal Weaned Calf Value (\$M)**, an index, expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

**Weaned Calf Value (\$W)**, an index, expressed in dollars per head, to predict profitability differences in progeny due to genetics from birth to weaning. The underlying objective being producers will retain 20% of the female progeny as replacements and sell the rest of the cull females and their male counterparts as feeder calves. Traits included are as follows (in no particular order): birth weight, weaning weight, milk, and mature cow weight.

**Beef Value (\$B)**, a terminal index, expressed in dollars per carcass, to predict profitability differences in progeny due to genetics for postweaning and carcass traits. This terminal index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a carcass grid. Traits included in the index are as follows: yearling weight, dry-matter intake, marbling, carcass weight, ribeye area and fat.

**Combined Value (\$C)**, an index, expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid. Expected progeny differences (EPDs) directly influencing a combined index: calving ease direct (CED) and maternal (CEM), weaning weight (WW), yearling weight (YW), maternal milk (Milk), heifer pregnancy (HP), docility (DOC), mature cow weight (MW), foot angle (Angle), claw set (Claw), dry matter intake (DMI), marbling (Marb), carcass weight (CW), ribeye area (RE) and fat thickness (Fat).

# PROFIT STARTS WITH THE RIGHT FOUNDATION

IF YOU'RE TARGETING QUALITY-DRIVEN PREMIUMS, SHE IS HALF THE GENETIC EQUATION.

Targeting the Brand™ identifies registered Angus cattle with the genetic potential to raise calves more likely to meet all 10 *Certified Angus Beef*® brand specifications.

## Minimum Genetic Requirements

Marbling EPD (Marb)	+0.65
Grid Value (\$G)	+55.0
